Bulldog Technologies Inc. Due Diligence Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Bulldog Technologies Inc. and its competitors. This provides our Clients with a clear understanding of Bulldog Technologies Inc. position in the Computers and Electronic Equipment Industry.

- The report contains detailed information about Bulldog Technologies Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for Bulldog Technologies Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The Bulldog Technologies Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Bulldog Technologies Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Bulldog Technologies Inc. business.

About Bulldog Technologies Inc.

Bulldog Technologies, Inc., a development Stage company, engages in the development, manufacture and sale of the Bulldog Online Security Systems (BOSS), which is designed to prevent cargo theft from containers, tractor-trailers and cargo vans, tanker trucks, storage year containers and other cargo transportation and storage equipment.

Products

The Yard BOSS: This system is designed for security of storage yard containers that alerts on site security personnel in the event of theft or tampering. The system consists of a RB-210 transmitter which houses motion and opening detection sensors. The system locks onto the locking rod of the cargo container or trailer. If unauthorized entry or movement occurs, the RB-210 transmits a radio signal to the base station receiver which alerts security personnel of the security breach. This system can also be integrated into a user's localized alarm system to provide the protection during non-business hours.

The Road BOSS External: This system attaches to the locking-rods of cargo trailers and containers while in transit or storage. The system for use on trucks alerts the driver, by way of a remote receiver carried by the driver, in the event someone attempts to access the cargo. This system uses the same RB-210 transmitter, but communicates with a receiver located in the truck. The RB-210 secures a cargo container or tractor trailer while in transit. This system is configured to interface with the existing tractor or trailer global positioning system (GPS) and telematics systems. The Road BOSS External integrates with satellite tracking and the asset tracking systems to provide information regarding door-seal integrity and time and location reports on trailers.

The Road BOSS External II: This system uses a range RB-600 transmitter and an internal global positioning system (GPS). This transmitter transmits its signal to GSM type cellular phone towers using the GPRS data communications protocol as standard data enabled cell phones. GSM cellular networks supporting GPRS data devices are globally deployed, allowing the system to be utilized in most countries. The Road BOSS External II provides the same level of security as the original Road BOSS External.

The Road BOSS Internal: This consists of a fixed internal transmitter (RB-300) that simultaneously monitors multiple roll-up and sliding doors, preventing unauthorized entry and intrusion. This system is designed to alert the driver through a mobile receiver should a thief attempt to enter, move, or remove items from the delivery vehicle. This system can be configured for use with the existing tractor or trailer global positioning system (GPS) and telematics systems, a stand alone mobile receiver, Yard BOSS secure lot systems. The RB-300 provides the ability to monitor multiple doors, and allows for monitoring without alerting would-be thieves to its presence.

The Road BOSS Internal II: This system consists of a fixed internal transmitter that simultaneously monitors multiple roll-up and sliding doors, preventing unauthorized entry and intrusion. This system contains the Company's internal gpsOne hybrid cellular global positioning system (GPS) determination technology and a CDMA based data transmitter, which allows position and security data to be sent directly from the monitoring device to Sprint's commercial cellular network. These signals are relayed to the Company's backend software monitoring application, and allow dispatchers and security personnel the ability to monitor the security and location of their fleet.

The Tanker BOSS: The Tanker Boss System consists of an in-truck control unit, the RP-400 and three types of sensor units, which monitor fuel level, fuel flow, and access tampering. The RP-400 monitors number and combination of sensors, without the need for customization. It contains motion based intelligence to compensate for differential fuel levels during vehicle motion. The RP-400 interfaces with existing global positioning system or vehicle tracking systems through a digital interconnect and support network arming and disarming, providing operations management complete control over all fuel movement.

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
