The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of C-Phone Corp. business.

### **About C-Phone Corp.**

C-Phone Corporation, incorporated in New York in 1986, is engaged primarily in the engineering, manufacturing and marketing of video conferencing systems. The company's video conferencing products are designed to principally operate over either a regular, analog telephone line or ISDN, a type of digital telephone line, and are available in configurations for the U.S. market as well as for most international markets. The Company presently distributes its products primarily to the business market and for special applications such as health care and security services. The Company sells its products principally to resellers and system integrators.

### **Products**

The basic components of the company's products consist of a set-top box, a hand-held remote and a power adapter. The company also sells an integrated camera module with a built-in microphone and an electronic pan/tilt/zoom feature. All of the company's products are designed to maximize the ease of use in both initial set-up and day-to-day operations. The company has designed its products to allow for current as well as future telecommunication connections. The company's current product line includes interfaces for connecting to analog and ISDN phone lines, as well for certain Internet and local area network connections.

## Special Features

The Company offers optional external, high quality, pan, tilt and zoom cameras with far-end control as well as tabletop and lapel microphones. The company also has products, which contain a built-in color camera and built-in microphone and products primarily targeted for security applications which have separate inputs for up to seven cameras. Most of the current products, in addition to operating over an analog phone line, also can operate over an ISDN phone line utilizing a separate terminal adaptor, which can be purchased from us.

The Company has products that support both the most recent telecommunications standards as well as the older standards which are used by many existing systems, including PC-based systems, video conferencing rooms and other stand-alone video conferencing systems. The company recently has finished development of a top-of-the line product, which will operate over three ISDN lines using a terminal adaptor developed by the Company. The company also has developed a feature, which will allow a connection through the Internet when using an ISDN phone line and an Internet service provider, which support a specific protocol.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

## ANALYSIS FEATURES

### SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

### Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

### PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

## Key Factors Examined by PESTEL Analysis:

**Political** – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

**Economic** – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

**Sociological** – What cultural and societal aspects will work upon the demand for the business's products and operations?

**Technological** – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

**Environmental** – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

**Legal** – What laws and legislation will exert influence on the style the business is carried out?

## **IFE, EFE, IE Matrices**

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

## **Porter Five Forces Analysis**

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

## **VRIO Analysis**

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

## Reputation

### Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
