Abstracts

C&D Technologies, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between C&D Technologies, Inc. and its competitors. This provides our Clients with a clear understanding of C&D Technologies, Inc. position in the [Electrical Equipment](#) Industry.

The report contains detailed information about C&D Technologies, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for C&D Technologies, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The C&D Technologies, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes C&D Technologies, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of C&D Technologies, Inc. business.

About C&D Technologies, Inc.

C&D Technologies, Inc. engages in the manufacture, marketing, and distribution of electrical power storage systems for the standby power market.

Products and Customers

The company primarily manufactures and markets integrated reserve power systems and components for the standby power market, which includes telecommunications, uninterruptible power supply (UPS), military, cable, utilities, nuclear power plant, renewable energy, pipeline, oil and gas, and other process industries. The integrated reserve power systems monitor and regulate electric power flow and provide backup power in the event of a primary power loss or interruption.

The company also produces individual components of these systems, including reserve batteries, power rectifiers, system monitors, power boards and chargers. Major applications of these products include wireless and wireline telephone infrastructure, cable television (CATV) signal powering, corporate data center network backup for use during power outages and power for utility switching stations during periods of power interruption. Its customers include original equipment manufactures (OEMs), broadband and telecommunications providers, investor owned utilities, as well as end user

customers across various industries, including, banking, retail, healthcare, and manufacturing.

The company primarily manufactures lead acid batteries for use in reserve power systems. It sells these batteries in a range of sizes and configurations. Its product offering includes flooded lead acid batteries (flooded); valve-regulated lead acid (VRLA) batteries; large format lithium battery systems and power rectifiers, and other related power distribution and monitoring equipment.

The company's reserve power systems include a range of power electronics products, consisting principally of power rectifiers and distribution and monitoring equipment. Its power rectifiers convert or 'rectify' external AC power into DC power at the required voltage to constantly charge the reserve battery or recharge the renewable energy storage battery. For installations with end applications that require varied power levels from 12Amps to 6000Amps, its power control and distribution equipment distributes the rectified power for each of the applications.

UPS: The company produces batteries for UPS systems, which provide instant battery backup in the event of primary power loss or interruption, thereby permitting an orderly shutdown of equipment or continued operation for a limited period of time until another power source comes back on-line. The company's DYNASTY High Rate Max VRLA Series batteries have been engineered specifically for UPS applications and deliver extended life, improved runtime. Its flooded XT products are utilized for system back up in major data centers and critical 24/7 applications.

Telecommunications: As with UPS, the company produces battery solutions to fill various application needs of telecommunications industry. Designed specifically for the telecommunications need for long life and extended runtime, its flooded MCT and LCT family of products have become the battery of choice for central office and critical back up applications. It also offers the VRLA MSE and msENDUR family of products designed for wireless applications, as well as other applications for non-flooded requirements. In addition, its C&D Tel Series VRLA Long Duration batteries are designed to Telcordia standards (an independent standards and testing company for telecommunications systems) to meet the demanding requirements of telecommunications applications. The company's telecommunications customers use the majority of its standby power products in applications, such as central telephone exchanges, microwave relay stations, private branch exchange (PBX) systems and wireless telephone systems. Its major telecommunications customers include national long distance companies, competitive local exchange carriers, wireline and wireless

system operators, paging systems, and PBX telephone locations using fiber optic, microwave transmission or traditional copper-wired systems.

CATV Signal Powering and Broadband: DYNASTY Broadband Series batteries are designed for demanding standby float applications in abusive environments. These batteries have been designed to offer the required combination of run time and service life for CATV signal powering and broadband applications. The company's gelled electrolyte technology provides heat transfer properties, which enable these batteries to perform in high temperature environments.

Modular Power Plants: The company offers various modular power plants, which are a type of integrated reserve power system. These products, which are referred to as the SAGEON Series Power Plant, integrate rectifiers with maintenance-free valve-regulated batteries.

Equipment for Electric Utilities, Industrial Control Applications and Renewable Energy Applications: The company produces rectifiers, batteries, and integrated systems used in reserve power and energy storage systems for switchgear and instrumentation control systems used in electric utilities, industrial control, and renewable energy applications. These power systems provide auxiliary power that enables fossil fuel, hydro and nuclear power generating stations, switching substations offshore platforms, and other industrial control facilities to be shut down in an orderly fashion during emergencies or power failures until a power source comes back on-line, as well as providing a storage medium to enable renewable energy resources to be aligned with demand.

International Operations

The company has international manufacturing facilities in China and Mexico. Its 67% joint venture facility in Shanghai, China, manufactures industrial batteries that are sold primarily in China, Europe, and the Middle East.

Competition

In North America, the company competes with Exide Technologies, EnerSys, East Penn Manufacturing, NorthStar, and FIAMM.

History

C&D Technologies, Inc. was founded in 1985.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
