- The Celsion Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Celsion Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Celsion Corp. business.

About Celsion Corp.

Celsion Corporation, an oncology drug development company, develops and commercializes targeted chemotherapeutic oncology drugs based on its proprietary heat-activated liposomal technology.

Thermodox (Doxorubicin Encapsulated In Heat-Activated Liposome)

The company is developing its primary product, ThermoDox that is in Phase III clinical trial for primary liver

cancer; and in phase II clinical trial for treatment of recurrent chest wall breast cancer.

ThermoDox is a liposomal encapsulation of doxorubicin, an approved and frequently used oncology drug for the treatment of a range of cancers. Localized mild hyperthermia (39.5-42 degrees Celsius) releases the entrapped doxorubicin from the liposome enabling high concentrations of doxorubicin to be deposited preferentially in a targeted tumor.

The company manufactures microscopic vesicles consisting of a discrete aqueous central compartment surrounded by a membrane bilayer composed of naturally occurring fats. Through a perpetual, worldwide, development and commercialization license from Duke University, the company has licensed heat activated liposomal technology that is differentiated from other liposomes through its low heat-activated release of encapsulated chemotherapeutic agents.

The company is conducting a ThermoDox double-blinded, placebo-controlled, global Phase III clinical study with ThermoDox in primary liver cancer study under a Special Protocol Assessment agreement with the FDA. The study is being conducted at approximately 70 clinical sites in North America, Italy, China, Taiwan, Hong Kong, Korea, Japan, Thailand, Malaysia, and the Philippines.

The company has a licensing agreement with Yakult Honsha under which Yakult was granted the right to commercialize and market ThermoDox for the Japanese market.

The company has a joint research agreement with Royal Phillips Electronics that is evaluating the combination of Phillips' high intensity focused ultrasound with Celsion's heat activated liposomal technology to develop new cancer drugs.

In 2009, the company commenced a pivotal open label, dose escalating ThermoDox Phase I/Phase II clinical trial for patients with RCW breast cancer.

History

Celsion Corporation was founded in 1982.

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
