Abstracts

China TransInfo Technology Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between China TransInfo Technology Corp. and its competitors. This provides our Clients with a clear understanding of China TransInfo Technology Corp. position in the [Software and Technology Services](#) Industry.

The report contains detailed information about China TransInfo Technology Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for China TransInfo Technology Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The China TransInfo Technology Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes China TransInfo Technology Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of China TransInfo Technology Corp. business.

About China TransInfo Technology Corp.

China TransInfo Technology Corp. provides public transportation information technology systems and related technology solutions in China. The company develops multiple applications in transportation, digital city, and land and resource filling systems based on Geographic Information Systems (GIS), technologies which are used to service the public sector.

The company's major products and services include transportation planning information system; pavement maintenance system; Electronic toll collection (ETC); traffic information service system; taxi security monitoring, commanding and dispatching platform; GIS-T (Transportation) middleware; traffic flow surveying systems; intelligent parking system; red light violation snapshot system; intelligent highway vehicle monitoring system; intelligent public transport system; transple passenger flow statistic, detecting and analysis system; palmcity navigation engine; comprehensive location based service platform; digital city; and 2-D and 3-D GIS. The company also offers range solutions for transportation oriented GIS (GIS-T), covering transportation planning, design, construction, maintenance and operation.

The company develops the ITS, in the transportation sector utilizing GIS application

software and technologies. It also develops GIS applications in digital city and land and resource areas.

Transportation Planning Information System: The company's transportation planning information system is a software system utilized by traffic management engineers to plan roads and water transportation, safety monitoring and conduct strategic planning. The system facilitates the management of different information and data required for traffic planning, such as national economic data, road and waterway data and digital mapping data. The system provides planners with information search tools, statistical analysis and models to serve planning and organizing needs.

Pavement Maintenance System: The company's pavement maintenance system is a practical business application system developed specifically for pavement data collection and operations management. Based on field data collected by PDA devices and with the support of a backend data center, the system provides multiple functional modules, such as data acquisition, project management, quality management, equipment management, materials management, assessment analysis, business reports and public travel information inquiries.

Electronic Toll Collection: Electronic Toll Collection (ETC): It is a technology that allows for electronic payment of tolls. An ETC system is able to determine if a car is registered in a toll payment program, alert enforcers of toll payment violations, and debit the participating account. The company's ETC system had been launched into two provinces.

Traffic Information Service System: The company's Traffic Information Service System is a software system that provides the public with real time road conditions and related information. The system transmits transportation data gathered from sensory devices and displays the results on an e-map interface. The system also supports Web based search and analysis applications.

Taxi Security Monitoring, Commanding and Dispatching Platform: The company's Taxi LED GPS Monitoring and Coordinating System is a highly integrated technological system operated with wireless satellite communication. The system consist of a GPS monitoring management center, imbedded GIS, an information transmitting center and onboard monitoring terminal modules. The system platform provides taxi authorities with basic information, such as the location of an accident, incident time and images from within a taxi. The system also allows for coordination with emergency services.

GIS-T (Transportation) Middleware: The company's GIS-T middleware is based on China's mainstream traffic GIS platform. The user of its middleware can establish its own application systems without significant customizations.

Traffic Flow Surveying Solutions: The company provides transportation management authorities at provincial and municipal levels with traffic flow surveying solutions. These solutions

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
