

Cohu, Inc. Due Diligence Report Including Financial, SWOT, Competitors and Industry Analysis

URL:	https://marketpublishers.com/r/CC829EEB43CBEN.html
Date:	December 1, 2017
Pages:	50
Price:	US\$ 499.00
ID:	CC829EEB43CBEN

Cohu, Inc. Due Diligence Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Cohu, Inc. and its competitors. This provides our Clients with a clear understanding of Cohu, Inc. position in the **Semiconductor Industry**.

- The report contains detailed information about Cohu, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for Cohu, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The Cohu, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Cohu, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Cohu, Inc. business.

About Cohu, Inc.

Cohu, Inc. engages in the development, manufacture, marketing, sales, and servicing of test handling and burn-in related equipment and thermal sub-systems for the semiconductor industry.

Segments

The company's segments include Semiconductor Equipment, Microwave Communication Systems, and

Video Cameras.

Semiconductor Equipment

This segment consists of the company's wholly owned subsidiaries, Delta Design, Inc. (Delta) and Rasco GmbH (Rasco).

Delta develops, manufactures and sells pick-and-place semiconductor test handlers, burn-in related equipment and thermal sub-systems to semiconductor manufacturers and semiconductor test subcontractors worldwide. Delta provides thermal sub-systems for use in advanced burn-in applications. These thermal sub-systems maintain and control the temperature of the integrated circuit during the burn-in testing process. The burn-in process is also used by semiconductor manufacturers to develop models of newly introduced devices.

Rasco develops, manufactures and sells gravity-feed and test-in-strip semiconductor test handling equipment used in final test operations by semiconductor manufacturers and test subcontractors.

The company's semiconductor equipment companies develop, manufacture, sell and service a line of equipment capable of handling a range of integrated circuit packages. Test handlers are electromechanical systems used to automate testing of the packaged integrated circuit in the backend of the semiconductor manufacturing process. Testers are designed to verify the performance of the integrated circuit, such as microprocessors, logic, DRAM or mixed signal devices. Handlers are engineered to thermally condition and present for testing the packages that protect the integrated circuit.

Semiconductor Equipment Products

The company offers products for the pick-and-place, gravity-feed, and strip semiconductor test handler, and burn-in markets. It sells various products in the semiconductor equipment market.

Pick-and-place: The Delta Castle is a pick-and-place test handler capable of thermally conditioning devices from -60 degrees Celsius to +160 degrees Celsius. The Castle can position from one to nine devices for testing. Its large thermal soak chamber provides a continuous flow of thermally conditioned devices to the test site allowing the handler to process parts at high speed when running at temperature. The Castle incorporates a vertical tray storage system that saves space on the test floor by minimizing the handler's footprint.

The Delta EDGE is a pick-and-place handler that combines a design with a small footprint and index time (processing speed of the contactor placement mechanism). The EDGE handler is designed to meet the needs of integrated circuit manufacturers and subcontractors who test at ambient and hot temperatures.

The Delta MATRiX is a pick-and-place handler capable of thermally conditioning devices from -60 degrees Celsius to +175 degrees Celsius. Delta's Summit series of pick-and-place thermal handlers are designed to meet the requirements of manufacturers of microprocessors, graphic processors and other high speed, high power integrated circuits. The Summit handlers incorporate Delta's proprietary thermal control technology. The Summit PTC, or Passive Thermal Control, and ATC, or Active Thermal Control, models dissipate the heat generated during test enabling the integrated circuit to be tested successfully at its maximum speed and performance.

The Delta Pyramid is the next generation thermal handler providing high throughput/high parallel test capabilities for microprocessors and graphics processing units. The system is highly configurable and is capable of adapting to various customer requirements ranging from small netbook microprocessor testing up to server product testing.

Gravity-Feed

Rasco's SO1x00 is a high throughput gravity-feed platform that provides a solution for testing up to 8 devices in parallel. These handlers can be configured for tube-to-tube or metal magazine input and output, and ambient-hot or tri-temperature testing. These handlers are kit-able for a range of integrated circuit (IC) packages.

Ras

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need 2-3 days to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
