Abstracts

Compellent Technologies, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Compellent Technologies, Inc. and its competitors. This provides our Clients with a clear understanding of Compellent Technologies, Inc. position in the Industry.

The report contains detailed information about Compellent Technologies, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Compellent Technologies, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Compellent Technologies, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Compellent Technologies, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Compellent Technologies, Inc. business.

About Compellent Technologies, Inc.

Compellent Technologies, Inc. provides enterprise-class network storage solutions. The company's Storage Center is a Storage Area Network (SAN), which enable users to store, recover, and manage large amounts of data.

Products

Single, Intuitive Management Interface

The company's Storage Center's software applications are managed through a single interface that spans its entire set of technologies, capabilities and configurations.

Data Progression (Automated Tiered Storage)

Storage Center's Data Progression application automatically classifies and migrates blocks of data based on user selected policies. When combined with Fast Track application, blocks of data are dynamically placed on the appropriate tracks on each drive within the system. Users can configure storage tiers based on technology, performance redundancy, or other criteria. Storage Center's block-level intelligence allows blocks of data to move both up and down tiers of storage and across drives for

appropriate placement over time based on frequency of access. With Data Progression technology, images are automatically placed, or can be manually placed by end users, on the appropriate tier of storage based on the required level of performance. Active images are stored on the Fibre-Channel Drives, which utilize enterprise-class protocols and hard drives. Inactive images can be stored on lower cost storage, either the Mid-Tier Fibre Channel Drives, which utilize enterprise-class protocol and lower tier hard drives, or Serial ATA Drives, which utilize higher density and lower performance.

Data Instant Replay (Continuous Snapshots)

Storage Center's Data Instant Replay application creates space-efficient copies of data, called Replays that enable recovery from data hazards, creation of test environments and duplication of boot volumes. End users can create Replays at multiple time intervals and keep those Replays as long as required. With Replays, end users are able to create more recovery points, which can reduce potential data loss and dependence on tape backups by allowing recovery to be targeted as close as possible to the time before the failure occurred.

Server Instant Replay (Boot from SAN)

Storage Center's Server Instant Replay application integrates with Storage Center's Data Instant Replay application to provide snapshots of server boot images that are stored and booted from a SAN instead of from local disks. This capability enables end users to deploy diskless servers and significantly simplifies server management. Each new boot image is created by taking a Replay of the initial boot image, which includes pointers to the original gold image rather than creating a duplicate copy of equal size. An intuitive wizard automates the set-up, management and restoration process.

Remote Instant Replay (Thin Replication)

Storage Center's Remote Instant Replay application creates any number of space-efficient Replays between primary and remote data centers without a pre-allocation of space. This granularity enables shorter recovery intervals, enabling end users near instant recovery from any point in time. Storage Center's hardware ships with a native iSCSI interface, allowing its system to replicate over long distances using existing Ethernet networks. It supports both IP-based and Fibre Channel replication. Storage Center's intuitive interface also enables users to test and verify disaster recovery online. This streamlined replication management is designed to allow recovery from a disaster in seconds with a single click disaster declaration.

Portable Volume

Compellent's Portable Volume jumpstarts replication, reducing initial synchronization time to days or even hours without the need for high-speed connections or a duplicate array. Instead of transmitting data via conventional links, end users connect a Portable Volume primed with the replication information needed for the initial synchronization to the primary storage array. Once the data to be replicated is loaded onto the portable disk drive, end users pack the drive in a protective travel case and carry or ship it to the secondary site. At the destination site, Storage Cen

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
