Abstracts

Computer Modelling Group Ltd. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Computer Modelling Group Ltd. and its competitors. This provides our Clients with a clear understanding of Computer Modelling Group Ltd. position in the [Software and Technology Services](#) Industry.

The report contains detailed information about Computer Modelling Group Ltd. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Computer Modelling Group Ltd.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Computer Modelling Group Ltd. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Computer Modelling Group Ltd. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Computer Modelling Group Ltd. business.

About Computer Modelling Group Ltd.

Computer Modelling Group Ltd., a computer software technology and consulting company, engages in the development and sale of reservoir simulation software. The company's reservoir simulation software assists petroleum companies to extract oil and gas from their reservoirs. It also provides consulting services.

Software Suite

The company's software suite includes CMOST – History Matching and Optimization Tool; STARS – Four Phase Advanced Thermal Simulator; GEM – Equation of State Compositional Simulator; IMEX – 3 Phase Black Oil/Condensate Simulator; Builder – 2D & 3D Graphical Simulation Model Builder; WinProp – PVT Fluid Property Modelling; and Results – 3D & 4D Results Visualization & Animation Tool.

CMOST: Computer Assisted History Matching, Optimization, and Uncertainty Assessment Tool: CMOST is a reservoir engineering optimization tool, employing experimental design techniques to determine the reservoir parameters which define the production and ultimate recovery of oil and gas fields.

STARS: Steam, Thermal and Advanced processes Reservoir Simulator: STARS is the standard for thermal, K-value compositional, chemical reaction and coupled geomechanical reservoir simulation. STARS is suited for advanced modelling of recovery processes involving the injection of steam, solvents, air and chemicals.

GEM: Generalized Equation-of State Model Reservoir Simulator: GEM is a full EoS compositional reservoir simulator with features for modelling recovery processes where the fluid composition affects recovery. GEM can be used during field development planning to reduce the risk of asphaltene precipitation, optimize the production of coal bed methane (CBM) deposits and reduce risk in acid gas and CO₂ sequestration projects. GEM provides reservoir simulation capabilities that go beyond the abilities of conventional black oil and K-value compositional simulators, including the effects of asphaltene precipitation and plugging during water, methane or CO₂ injection.

IMEX: Implicit-Explicit Black Oil Simulator: IMEX is a three-phase, fourcomponent black oil reservoir simulator for modelling primary depletion and secondary recovery processes in conventional oil and gas reservoirs. IMEX also models pseudomiscible and polymer injection in conventional oil reservoirs and primary depletion of gas condensate reservoirs, as well as the behaviour of naturally or hydraulically fractured reservoirs. IMEX provides the capabilities and features required for small to massive (100+ million grid block) simulations for screening prospects, setting up pilot designs, monitoring and optimizing field operations and complex full-field reservoir studies, with the objective of improving production rates, ultimate recovery and value.

Builder: Pre-Processing Applications: Builder is an application used in the preparation of reservoir simulation models. It represents the standard in model preparation, reducing time and the frustration of conventional model-building methods.

WINPROP: Phase-Behaviour and Fluid Property Program: WinProp is a Microsoft Windows based software application designed for modelling the phase behaviour and properties of reservoir fluids. This Equation-of-State (EoS) engineering tool assists engineers in understanding the distribution of properties within their reservoir fluid system under various depletion scenarios and the interaction with injected fluids, from small scale lab experimentation to large scale field effects.

Results: Post-Processing Applications: Results is a Windows based program that is used to evaluate the output for each of CMG's simulation products. It provides visualization of the results of the simulator calculations.

Collaborations

The company has collaborations with its partners Shell International Exploration and Production BV (Shell) and Petroleo brasileiro S.A. (Petrobras) to jointly develop the newest generation of reservoir simulation software.

Customers

The company provides reservoir simulation software licenses to approximately 360 oil companies, consulting firms and research institutions in 49 countries.

History

Computer Modelling Group Ltd. was founded in 1996.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
