Abstracts

CytRx Corporation Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between CytRx Corporation and its competitors. This provides our Clients with a clear understanding of CytRx Corporation position in the [Pharmaceuticals and Biotechnology](#) Industry.

The report contains detailed information about CytRx Corporation that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for CytRx Corporation. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The CytRx Corporation financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes CytRx Corporation competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of CytRx Corporation business.

About CytRx Corporation

CytRx Corporation, a biopharmaceutical research and development company, engages in the development of human therapeutics, specializing in oncology.

Clinical Development Programs

The company's drug development pipeline includes clinical development of three product candidates for cancer indications, including three planned Phase 2 clinical trials for INNO-206 as a treatment for pancreatic cancer, gastric (stomach) cancer, and soft tissue sarcomas; two Phase 2 proof-of-concept clinical trials with bafetinib in patients with B-cell chronic lymphocytic leukemia, (B-CLL), and patients with glioblastoma multiforme; and a registration study of tamibarotene for the treatment of acute promyelocytic leukemia (APL). In addition to its core oncology programs, the company is developing two drug candidates based on its molecular chaperone regulation technology.

INNO-206: INNO-206 is a prodrug of the commonly prescribed chemotherapeutic agent doxorubicin. Specifically, it is the (6-Maleimidocaproyl) hydrazone of doxorubicin.

Bafetinib: Bafetinib is a drug developed by the Japanese pharmaceutical company

Nippon Shinyaku, to overcome the limitations of Gleevec and second-line tyrosine kinase inhibitors in resistant chronic myelogenous leukemia (CML). The company has announced plans to develop bafetinib as a treatment for B-cell chronic lymphocytic leukemia (B-CLL) and glioblastoma multiforme (GBM), due to the potent and specific inhibitory properties of bafetinib against Lyn kinase, which is overexpressed in both B-CLL and GBM.

Tamibarotene: Tamibarotene is an orally available, synthetic retinoid rationally designed to overcome resistance and avoid toxic side effects of differentiation therapy with all-trans retinoic acid, (ATRA), a component of the first-line treatment for APL. The company has initiated a dose escalation clinical trial with tamibarotene combined with TRISENOX (arsenic trioxide) injection (marketed by Cephalon, Inc.) in patients with relapsed APL.

Arimoclomol: Arimoclomol is an orally-administered small-molecule product candidate that functions by stimulating a normal cellular protein repair pathway by amplifying molecular chaperone proteins implicated in neurological disorders. In 2009, a Phase II/III adaptive clinical trial commenced to study arimoclomol in a subset of patients with the inherited or familial form ALS.

Iroxanadine: Iroxanadine also is an orally-administered small-molecule product candidate. It would function by stimulating the molecular chaperone protein response in the endothelium, the thin layer of cells that line the interior surface of human blood vessels. Iroxanadine is for the treatment of diabetic ulcers.

Other Technologies

The company's other technologies are CRL-5861, an intravenous agent for treatment of sickle cell disease and other acute vaso-occlusive disorders, and TranzFect, a delivery technology for DNA-based and conventional vaccines and other uses.

License Agreements

INNO-206: The company has an agreement with KTB Tumorforschungs GmbH, (KTB), for the license of patent rights held by KTB for the worldwide development and commercialization of INNO-206.

Bafetinib: The company has worldwide (with the exception of Japan) royalty-bearing license agreement with Nippon Shinyaku, including the right to grant sublicenses, for

the intellectual property relating to bafetinib.

Tamibarotene: The company also has an agreement with TMRC Co., Ltd. for the license of patent rights held by TMRC for the North American development and commercialization of tamibarotene. The license is applies to products that may be subject to the licensed intellectual property and may be used in the treatment of APL. The agreement also grants the company an option to include with in the license the use of the drug in other fields in oncology, including multiple myeloma, myelodysplastic syndrome, and solid tumors.

Competition

The company's product, bafetinib, competes with Gleevec, Sprycel, and Tassigna.

History

CytRx Corporation was founded in 1985.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
