The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Deutz AG business.

About Deutz AG

DEUTZ AG manufactures diesel and gas engines in Germany. The company operates in two segments, Compact Engines, and Medium-Sized and Large Engines.

Compact Engines

The Compact Engines segment produces liquid-cooled and air-cooled diesel engines in Cologne, Ulm, and Zafra (Spain). This segment covers the output range from 4 to 440 kilowatts. In the Stationary Equipment application segment, the company offers engines for compressors, pumps, gensets and welding units. The company has been a strategic supplier for Atlas Copco. Within its range of portable compressors and generators, it uses their engines to provide its customers with air or electricity wherever they go. DEUTZ is an important supplier and partner to JLG.

Medium-Sized and Large Engines

The Medium-Sized and Large Engines segment manufactures water-cooled diesel and gas engines covering the output range from 180 to 4,000 kilowatts. This segment operation is carried out by DEUTZ Power Systems GmbH & Co. KG. In the 180 to 4,000 kW output range, the gensets produce electricity, heat and cooling from many sorts of gas, including natural gas, landfill gas, sewage gas, biogas, mine gas and coke oven

gas. DEUTZ Power Systems also supplies the services required for power generation, from start-up operations through servicing to general maintenance.

Markets

The company markets its products to construction, underground mining, compressors, automotive, agriculture, gensets, welders, pumps, material handling, ships, and power generation sectors. It has operations in approximately 130 countries with primary focus on Europe, the United States, Africa, Asia, and Australia.

Significant Events

Deutz AG has formed a joint venture for the production and marketing of diesel engines in China's car sector. The joint venture would be called Deutz (Dalian) Engine with Deutz and its Chinese partner FAW Jiefang Automobiles would each holding a 50% stake in the new project.

On December 10, 2009, Robert Bosch GMBH, Deutz AG, and Eberspaecher GmbH & Co. KG announced that they have signed an agreement to set up a joint venture in the area of diesel exhaust aftertreatment. The joint venture is to be known as 'Bosch Emission Systems GmbH & Co. KG' and to be headquartered in Stuttgart.

History

DEUTZ AG was founded as N. A. Otto & Cie. by Nicolaus August Otto and Eugen Langen in 1864.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
