About Digital Valleys Corp.

Digital Valleys Corp., a development stage company, focuses on the development of an online help desk customer support system to assist service companies in improving their customer relationship management in the United States.

Software Product

The company's software product would address problem management and workflow; knowledge management; and data analysis and reporting.

The company intends to its system to be Web-based system, which would allows its customers to access the system from their intranet or from the Internet. The intranet mode allows internal users of a customer's organization to access the system through the customer's intranet. The Internet mode allows off-site employees to access the system through the Internet. It intends for customers to be access its software product through two different means, email and Web forms.

The System Modules

The company's system would comprise four modules, including support ticket module;

emailing module; reporting module; and system administration module.

Support Ticket Module

This module track, route, and resolve issues. The company intends for the support ticket module to be customized to the needs of the organization. System administrators would be able to add and customize ticket fields as needed. The support ticket module would be used to support two functions: to enable customer support representatives to track the status of tickets and manage the progress of each ticket and to enable end customers to submit and track their own support requests.

Emailing Module

The purpose of this module is to automate the response to the customer by sending an email automatically notifying the end user about the status of tickets. This module will also enable the system to receive tickets through an email address.

Reporting Module

The purpose of the reporting module is to query the system on multi user levels about the status of tickets and to generate management reports to evaluate the performance of the helpdesk system.

System Administration Module

The system administration module consists of a control panel. This module enable the system administrator to setup the application on the server; customize the ticketing system to suit the organization's needs; maintain user accounts; filter email originating tickets before presenting them to the help desk team; and assign pending tickets to specific personnel.

Target Market

The company's customer base for proposed system includes small and medium sized businesses that provide services to their clients and are looking for a help desk solution to support their products and services and small and medium sized businesses that provide services to their clients and want to improve their customer support image and provide faster customer support through an email and Internet forms.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
