The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Edenor SA business.

## **About Edenor SA**

Empresa Distribuidora y Comercializadora Norte S.A. operates as an electricity distribution company in Argentina.

The company holds a concession to distribute electricity to the northwestern zone of the greater Buenos Aires metropolitan area and the northern portion of the City of Buenos Aires, comprising an area of 4,637 square kilometers.

### **Network**

As of December 31, 2009, the company's system through which it supplied electricity comprised 70 sub-stations of high/high voltage, high/high/medium voltage, high/medium voltage, representing 13,404 MVA of transformer capacity, and 1,365 kilometers of high-voltage power lines of 220 kV and 132 kV. The distribution system of medium/low voltage comprised 14,879 transformers of medium/low voltage, representing 5,643 MVA of transformer capacity, 9,191 kilometers of medium-voltage power lines 33, and 13.2 kV and 24,761 kilometers of low-voltage power lines 380 V.

The company's transmission and subtransmission system (HV System) comprises 220kV and 132kV head sub-stations: Casanova, Matanza, Ramos Mejía, Morón, Agronomía, Puerto Nuevo, Nuevo Puerto, Malaver, Colegiales, Edison, Matheu, Talar,

and Zappalorto. This HV System, together with the Edesur and Edelap systems, forms the Greater Buenos Aires (GBA) system. The GBA system is operated by the Sociedad Anónima Centro de Movimiento de Energía (SACME).

The company distributes energy from the sub-stations of high/medium voltage through the primary 13.2kV and 33kV system to a secondary 380/220 V low-voltage system. Its distribution network, consisting of various transformers, power lines and substations, distributes the electricity to final users with varied voltages depending on the requirements of end users.

## Customers

As of December 31, 2009, the company served 2,604,612 customers. It classifies its customers pursuant to the following tariff categories: residential customers whose peak capacity demand is approximately 10kW; small commercial customers whose peak capacity demand is approximately 10kW; medium commercial customers whose peak capacity demand is between 10kW and 50kW; industrial customers whose peak capacity demand is approximately 50kW; large users who purchase their electricity requirements directly from generation or broker companies through the wholesale electricity market; and public lighting and shantytown customers whose peak capacity demand is approximately 10kW.

## History

The company was incorporated in 1992. It was formerly known as Empresa Distribuidora Norte Sociedad Anonima and changed its name to Empresa Distribuidora y Comercializadora Norte S.A. in 1996.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

## ANALYSIS FEATURES

### SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

### Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

### PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

### Key Factors Examined by PESTEL Analysis:

**Political** – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

**Economic** – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

**Sociological** – What cultural and societal aspects will work upon the demand for the business's products and operations?

**Technological** – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

**Environmental** – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

**Legal** – What laws and legislation will exert influence on the style the business is carried out?

### **IFE, EFE, IE Matrices**

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

## **Porter Five Forces Analysis**

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

## **VRIO Analysis**

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

## Reputation

### Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
