The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Enagas SA business.

About Enagas SA

Enagás, S.A. engages in the transportation, regasification, and storage of natural gas in Spain.

The company's assets include approximately 8,000 kilometers of high pressure gas pipelines and three regasification plants, in Barcelona, Cartagena and Huelva, with a total LNG emission capacity of 4,350,000 cubic meters per hour, and total LNG storage capacity of 1,437,000 cubic meters.

The company also owns an underground storage facility in Serrablo, Huesca. In addition the company was made the technical operator of the gas system. The company has three compressor stations with total installed power capacity of 440,567 HP.

The company is the owner of an underground storage facility at Serrablo, a natural gas field located between the municipalities of Jaca and Sabiñánigo (Huesca).

Segments

Gas transport: The company's main activities consists of the movement of gas through its transport network, composed of gas pipelines for the primary (with maximum design pressure equal to or approximately 60 bars) and secondary (with maximum design

pressure of between 60 and 16 bars) transport of gas to distribution points, as owner of most of the Spanish gas transport network.

Regasification: The gas is transported from producer countries in methane tankers at 160°C below zero in liquid form (LNG) and is unloaded at the regasification plants, where it is stored in cryogenic tanks. At these facilities, the temperature of the LNG is raised through a physical process, using saltwater vaporisers, transforming it into gas. The natural gas is then injected into gas pipelines and transported throughout the Spanish mainland.

Storage: Enagás, S.A. operates one underground storage facility: Serrablo, located between the towns of Jaca and Sabiñánigo (Huesca), owned by the company.

Technical system management

In 2006, Enagás, S.A. as technical system manager, continued to carry out the tasks entrusted to it under Royal Decree Laws, intended at guaranteeing the continuity and security of gas supply, and the co-ordination of access, storage, transport, and distribution points.

Purchase-sale of gas on the regulated market

The company serves the needs of the tariff market in accordance with the provisions of the Hydrocarbons Law.

Liberalised activities

These refer to all liberalised activities and transactions related to Group companies.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
