Abstracts

Entech Solar, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Entech Solar, Inc. and its competitors. This provides our Clients with a clear understanding of Entech Solar, Inc. position in the [Electrical Equipment](#) Industry.

The report contains detailed information about Entech Solar, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Entech Solar, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Entech Solar, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Entech Solar, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Entech Solar, Inc. business.

About Entech Solar, Inc.

Entech Solar, Inc. focuses on the development of renewable energy technologies for the commercial, industrial and utility markets. The company's designs in concentrating solar modules provide both electricity and thermal energy as part of its ThermaVolt product line and electricity only as part of its SolarVolt product line. In January 2010, the company launched its collimating tubular skylight.

The company's target customers would be both distributors and end-users of energy. Its ThermaVolt and SolarVolt would perform in locations that receive a minimum of 5 kilowatt-hours per square meter per day of direct sunlight. In the United States, the company would focus on customers located in the southwestern states, primarily Texas, California, Arizona, New Mexico, Nevada, Utah and Colorado.

Products

The company's products would incorporate the ENTECH CPV technology. This technology can be used to develop solar energy products and systems. ENTECH solar modules can generate the same electrical power as non-concentrating solar cells but with much less silicon. The company is in the process of developing two main product offerings, ThermaVolt and SolarVolt solar systems, and has launched its tubular skylight

product.

ThermaVolt

ThermaVolt is being designed as a roof- or ground-mounted module that produces both electricity and thermal energy. ThermaVolt is comprised of proprietary modules that concentrate sunlight onto solar cells, with the modules deployed on a dual-axis tracking system. ThermaVolt solar modules are designed with a size and weight similar to traditional flat-plate (non-concentrating) solar panels readily available in the industry. The heat exchanger enables the ThermaVolt system to capture both heat and light from the sun and, consequently, to deliver thermal energy, as well as electricity increasing the system's energy output.

SolarVolt

SolarVolt is designed to be a roof- or ground-mounted, electricity producing solar system comprised of its proprietary air-cooled modules and is also designed to be deployed on a dual-axis tracking system. The company's use of dual-axis tracking system increases electricity production by ensuring that the system faces the sun at an optimal angle throughout the day. Typical system sizes for the SolarVolt product would range from 1 megawatt to 10 megawatt.

Tubular Skylight Technology

The company's patented tubular skylight technology redirects sunlight from the sky to the work area beneath the skylight in a process known as collimation, which increases the optical transmission of natural light compared to conventional tubular skylights.

Suppliers

The company's raw materials are made to its proprietary specifications by vendors such as 3M, DuPont, and Tyco.

History

Entech Solar, Inc. was founded in 1984.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
