Abstracts

Entegris, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Entegris, Inc. and its competitors. This provides our Clients with a clear understanding of Entegris, Inc. position in the [Semiconductor](#) Industry.

The report contains detailed information about Entegris, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Entegris, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Entegris, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your

company's decision-making processes.

In the part that describes Entegris, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Entegris, Inc. business.

About Entegris, Inc.

Entegris, Inc. engages in the development, manufacture, and supply of products and materials used in processing and manufacturing in the semiconductor and other high-technology industries.

For the semiconductor industry, the company's products maintain the integrity of critical materials used by the semiconductor and other high-technology industries. For other high-technology applications, its products and materials are used to manufacture flat panel displays, chemicals, photoresists, solar cells, gas lasers, optical and magnetic storage devices, fiber optic cables, fuel cells, and critical components for aerospace, glass manufacturing, and biomedical applications.

The company offers a product portfolio that includes approximately 15,000 standard and customized products. Its products include both unit driven and capital expense driven products. Its unit-driven and consumable product class includes membrane-based liquid filters and housings, metal-based gas filters, resin-based gas purifiers, wafer shippers, disk-shipping containers and test assembly and packaging products and consumable graphite and silicon carbide components used in plasma etch, ion implant, and chemical vapor deposition processes in semiconductor manufacturing. The company's capital expense driven products include its components, systems and subsystems that use electro-mechanical, pressure differential and related technologies, to permit

semiconductor and other electronics manufacturers to monitor and control the flow and condition of process liquids used in these manufacturing processes, and its process carriers that protect the integrity of in-process wafers.

Segments

The company designs, manufactures, and markets its products through three segments: Contamination Control Solutions Segment; Microenvironments Segment; and Specialty Materials Segment.

Contamination Control Solutions

The Contamination Control Solutions segment offers a range of products that purify, monitor, and deliver critical liquids and gases to the semiconductor manufacturing process and similar manufacturing processes.

Liquid Filtration Products: Liquid processing occurs during multiple manufacturing steps, including photolithography, deposition, planarization, and surface etching and cleaning. The fluids that are used include various mixtures of acids, bases, solvents, slurries and photochemicals, which in turn are used over a range of operating conditions, including temperatures from 5 degrees Celsius up to 180 degrees Celsius. The design and performance of its liquid filtration and purification products are critical to the semiconductor manufacturing process. The company's low hold-up volume disposable filters, with flat sheet membranes, use its Connectology technology. It also offers a line of consumable polyvinyl alcohol (PVA) roller brush products to the wafer following the chemical mechanical planarization process. The company's Planarcore PVA roller brush is molded on the core to allow installation that reduces tool downtime.

Components and Systems: The company offers chemical delivery products that allow the safe delivery of chemicals from the chemical manufacturer to the point-of-use in the semiconductor fab. These products are made from perfluoroalkoxy (PFA), a fluoropolymer resin used in the semiconductor industry. Both semiconductor manufacturers and semiconductor original equipment manufacturers (OEMs) use its chemical delivery products and systems. The company's product line provides its customers with a single-source provider for their chemical storage and management needs throughout the manufacturing process. Its chemical delivery products include valves, fittings, tubing, pipe, chemical containers, and custom fabricated products for chemical applications.

The company's proprietary photochemical filtration and dispense systems integrate its patented two-stage, filter device and valve control technologies. Its two-stage technology permits the filtering and dispense functions to operate independently so that filtering and dispensing of photochemicals can occur at different rates. It offers a line of proprietary filters specifically designed

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
