Abstracts

Eurotech, Ltd. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Eurotech, Ltd. and its competitors. This provides our Clients with a clear understanding of Eurotech, Ltd. position in the Industry.

The report contains detailed information about Eurotech, Ltd. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Eurotech, Ltd.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Eurotech, Ltd. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Eurotech, Ltd. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Eurotech, Ltd. business.

About Eurotech, Ltd.

Eurotech Ltd., (the company) was incorporated in Columbia in 1995. The company is a development-stage company engaged in the business of acquiring, developing, and marketing emerging chemical and electronic technologies designed to create products for use in the environmental and security sectors. The company's business is divided into three divisions: Nuclear & Environmental Technology Solutions; Security & Safeguards (which is currently conducted through its Markland subsidiary) and Advanced Performance Materials.

Nuclear & Environmental Technology Solutions Division (Nets)

The company's NETS division operates under a quality assurance program that meets Federal, domestic and international requirements, including auditing suppliers and testing laboratories. NETS has three technologies that are being actively marketed. They consist of a family of silicon-based geopolymers known as EKOR™, a fire-resistant surface fixative known as Rad-X, and a set of remote sensing technologies for subsurface investigation known as EMR.

The following is a description of the company's NETS technologies:

EKOR™

EKOR™ was developed jointly by scientists at the I.V. Kurchatov Institute, or Kurchatov, and members of the Euro-Asian Geophysical Society, or EAPS, both based in Moscow, Russia, as a family of materials designed for long-term isolation of hazardous and radioactive materials. EKOR(TM) materials also possess other highly desirable performance characteristics such as chemical , fire and heat resistance, and resistance to environmental aging and degradation from radiation.

RAD-X

Rad-X was developed from a version of Firesil™, using certain new ingredients to improve its properties for its intended use as an interior fire-resistant fixative for equipment or facilities with contaminated surfaces. Rad-X differs from EKOR™ Sealer Plus in that it is not weather-resistant and does not have the chemical, radiation and aging resistance needed for long-term protection. Rad-X does provide a low-cost fixative for surfaces that are scheduled for disassembly or dismantlement and need strong adhesion (glue-down of contaminated particles that could become airborne) and fire-resistance properties.

Subsurface Remote Sensing Technologies (Emr/Ac)

In an agreement dated July 2001 and amended in 2001 with Trylon Metrics, Inc., the company was licensed certain rights to Acoustic Core and Electromagnetic Radiography for specific markets, consisting of illicit material detection, above surface or subsurface nuclear or other hazardous material remediation, marine dredging sites (inland and ocean) and oil exploration. The company has agreed to license the illicit materials detection application to Markland and the remaining three applications to HomeCom.

Advanced Performance Materials Division (APM)

In 2001, the company formed the Advanced Performance Materials Division. In the APM division, the company are conducting operations relating to technologies acquired directly from Dr. Figovsky and the following seven single technology Israeli startup companies which developed certain technologies and in which it own a significant equity interest. A majority of these companies have proceeded through their "incubator stage" and the subject technology is awaiting commercialization as the company either own or control (through stock ownership in such entities) the intellectual property rights of these

entities.

Chemonol (Developer of Hybrid Non-Isocyanate Polyurethane or HNIPU Processes)

HNIPU is a hybrid polyurethane that does not involve the toxic isocyanates utilized in the production of conventional polyurethane and that has lower permeability and greater chemical resistance qualities as compared to conventional polyurethane.

Sorbtech, Ltd. (Developer OF SB-1)

There are many oil spill adsorbents available in the market. SB-1 is a new product that can be used to adsorb oil. SB-1 is an innovative new sorbent composed of basalt non-woven fabric - an ultra-fine basalt filament. A proprietary process results in extremely high adsorption capacity when compared to existing adsorbents currently available in the marketplace.

SB-1

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
