Abstracts

GeneThera Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between GeneThera Inc. and its competitors. This provides our Clients with a clear understanding of GeneThera Inc. position in the Industry.

The report contains detailed information about GeneThera Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for GeneThera Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The GeneThera Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes GeneThera Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of GeneThera Inc. business.

About GeneThera Inc.

GeneThera, Inc., a development stage biotechnology company, develops molecular assays for the detection of food contaminating pathogens, veterinary diseases, and genetically modified organisms.

The company develops assays for chronic wasting disease among elk and deer, and Mad Cow Disease among cattle. It also develops vaccines for E.coli (predominantly in cattle) and Johne's disease (predominantly in dairy cattle and bison).

The company's animal disease assay development business is based on its Integrated Technology Platform (ITP) that combines a proprietary diagnostic solution called Gene Expression System (GES) with PURIVAX, which is a purification system that removes contaminating particles from biological fluids.

Products

CWD/BSE TEST

The company has developed a molecular test for the detection of Chronic Wasting Disease (CWD). This test measures the level of RNA of a genetic marker, EDRF that is

found to be at low levels in animals affected by the disease. Chronic Wasting Disease and Mad Cow Disease are both in the family of diseases called Transmissible Spongiform Encephalopathy (TSE).

JOHNES'S TEST

The company has developed a molecular test for the detection of Johne's disease, in blood. Johne's disease is a bacterial disease caused by Mycobacterium Paratuberculosis (MAP) in blood; which affects primarily dairy cows.

Products under development

DNA VACCINES

The company is developing two DNA vaccines. One vaccine targets Johne's disease; the other is related to TSE. Its approaches to develop these vaccines are based on the use of PURIVAX technology, genetically engineered Adenoviral and AAV, and silencing RNA technology (iRNA).

DISEASE DNA VACCINE

The company is developing a vaccine for Johnes disease using Adenoviral genetically engineered virus and PURIVAX technology. It has modified the Adenovirus by inserting a gene of the MAP bacterium responsible for triggering the infection in blood cells. Using PURIVAX, the genetic construct has been purified and characterized.

TSE DNA VACCINE

The company intends to develop a TSE vaccine based on the use of iRNA technology. It has isolated a specific sequence of the prion protein gene.

Agreement - E.COLI 0157H: 7 VACCINE

The company entered into an agreement for the rights to an exclusive license with the University of New Mexico for the development and commercialization of E-Coli 0157-h7 vaccine.

Research and Development Services

Molecular, Cellular, Viral Biology Research, and Consulting Services: The company provides independent research services to scientists in academia, the pharmaceutical industry, and the biotechnology industry.

Gene Therapy Testing Services: The company offers GLP testing programs for somatic cell, viral, and naked DNA-based gene therapies.

Replication-Competent Viral Vector Testing: Sensitive in vitro cell culture assays are used to detect replication-competent retroviruses or adenoviruses. The company intends to work with clients to provide custom replication-competent virus detection assays for the particular vector construct.

Complete Somatic Cell and Viral Vector Packaging and Producer Cell Line Characterization: The company offers all of the assays mandated by regulatory authorities worldwide for the bio-safety analysis and characterization of cells and cell lines used in gene therapy products.

Vector Stock Characterization: Custom purity and potency testing is available for gene therapy viral vector stocks.

Vector Purification Process Validation for Viral Clearance: Most biopharmaceuticals require viral clearance studies to validate the removal of contaminants, such as those from bovine components or from helper viruses (adenovirus in AAV production). The company provides custom design and performance of viral studies for various vector purification processes.

Custom Bio-safety Testing Programs for Somatic Cell, Ex Vivo Cell, and Tissue Therapies: The company guides its clients through the process of designing and implementing a bio-safety testing program.

Competition

The company's competitors include Prionics AG, IDEXX Laboratories, Inc., and Bio-Rad Laboratories, Inc.

History

GeneThera, Inc. was founded in 1995.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
