Highland Gold Mining Ltd. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Highland Gold Mining Ltd. and its competitors. This provides our Clients with a clear understanding of Highland Gold Mining Ltd. position in the **Metals and Mining Industry**.

- The report contains detailed information about Highland Gold Mining Ltd. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for Highland Gold Mining Ltd.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The Highland Gold Mining Ltd. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Highland Gold Mining Ltd. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Highland Gold Mining Ltd. business.

About Highland Gold Mining Ltd.

Highland Gold Mining Limited (Highland Gold or the group) was incorporated in Jersey in 2002 for the purpose of acquiring, consolidating and developing a portfolio of quality gold mining projects in the Russian Federation with good growth potential. It is the holding company of a group comprising MNV, and two development projects, Darasun, Novo and Mayskoye.

Highland Gold holds its interests in its operations through its wholly owned direct subsidiary Stanmix

Holding Limited, incorporated in Cyprus.

Mnogovershinnoe (MNV)

MNV is located in the Nikolaevsk area of the Khabarovsk Territory in the far-east of the Russian Federation. The mine is located some 650 km north of the city of Khabarovsk and is accessed from Nikolaevsk-na-Amure, the principal regional centre, via a 132-km long gravel road.

The Group owns 100% of the MNV joint-stock company, which has a licence for the extraction of gold ore. Operations at MNV consist of both underground and open-pit mining of several high grade gold deposits. In addition, MNV has its own gold processing plant.

The ore bodies at Mnogovershinnoe are located within two zones, the Main Zone and the Intermediate Zone. The Main Zone is some 5.8-km long and contains the Central, Upper and Reindeer ore bodies. The Intermediate Zone is some 6.2 km long and is located 1.5 km northwest of the Main Zone and contains the Intermediate I and II ore bodies together with the South, Flank, North, Deep, Quiet and Boulder ore bodies. The overall width of the two zones is some 2.5 km. All the ore bodies strike northeast and dip to the northwest. Generally both ore body thickness and gold grade distribution is highly irregular.

The MNV ore bodies are characterised as gold-chalcedony-quartz, low sulphide, veins. Quartz constitutes more than 95% of the ore bodies. Gold is distributed irregularly in the form of fine disseminated impregnations, small individual pockets and thin veinlets.

The Darasun project

The Darasun project is situated in the Chita Region of Eastern Russia. It consists of three deposits, Darasun, Teremky and Talatui. The Company holds a 100% interest in Darasun, which holds certain assets of the Darasun. In addition, the company owns title to mine shaft infrastructure, underground mining equipment and maintenance facilities, as well as a number of buildings.

The Darasun deposits occur within the Darasun-Mogocha zone of the Transbaikalian gold-molybdenum belt. The deposits are located in a 60 km to area containing numerous gold and silver occurrences. The basement rocks, consists of early Palaeozoic metamorphosed gabbros which are intruded by Middle-Palaeozoic to early Mesozoic intrusives. The gold mineralisation is considered to be associated with Middle to Late Jurassic fault controlled intrusives represented as stocks and dykes.

The deposits at Darasun occur as thin quartz-sulphide veins. Some 140 individual veins have been identified in the Darasun area. The ore bodies consist of thin quartz veins, generally from 5 cm to 15 cm in thickness, surrounded by a halo of lower grade disseminated mineralisation. The overall thicknesses of the zones are between 0.6 and 1.5 m. Although thin, the ore zones are laterally extensive both along strike (up to 2 km) and down dip (1 to 1.2 km).

The veins at Darasun trend both to the northwest and to the northeast. The northwest trending veins are relatively small and generally do not exceed 500 m in strike length. The northeast trending veins are economically more significant. These are sub-vertical in nature and contain steeply plunging pay shoots, which in places can be traced from surface to in excess of 500 m depth.

At shallow levels the ore veins are composed mainly of quartz, pyrite and arsenopyrite while at deeper levels quartz, pyrrhotite and chalcopyrite predominate. Typically the veins consist of 32%, 14% pyrite and 11% carbonates.

Novoshirokinskoye

The Company is currently preparing a feasibility study into the development of its 87% owned Novoshirokinskoye project, which is located in the Chita Region of Eastern Russia. An extensive amount of

mining infrastructure already exists on this project including

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
