Abstracts

Hollysys Automation Technologies, Ltd Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Hollysys Automation Technologies, Ltd and its competitors. This provides our Clients with a clear understanding of Hollysys Automation Technologies, Ltd position in the [Computers and Electronic Equipment](#) Industry.

The report contains detailed information about Hollysys Automation Technologies, Ltd that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Hollysys Automation Technologies, Ltd. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Hollysys Automation Technologies, Ltd financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented

on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Hollysys Automation Technologies, Ltd competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Hollysys Automation Technologies, Ltd business.

About Hollysys Automation Technologies, Ltd

Hollysys Automation Technologies Ltd. engages in the design, production, and installation of automation and process control systems in China. The company serves industrial, railway, nuclear, and utility customers.

Products and Services

The company's proprietary technologies are applied in product lines, including Distributed Control Systems (DCS) and Programmable Logic Controllers (PLC), high-speed railway Train Control Centers (TCC) and Automatic Train Protection (ATP), and safety control product NMS for nuclear power plants.

DCS Products: The company's primary offering is a suite of automation systems. Its industrial market clientele ranges from petrochemical, thermal power industries, to cement production and paper making industries. The two mainstream products for this market segment are its DCS products and its Programmable Logic Controllers (PLCs). DCS are a network of controllers, sensors, actuators, and other devices that can be

programmed to control outputs based on input conditions through logic calculations. In an automated production line, sensors or 'instrumentations' are distributed across the production facility to monitor sub-systems like the robots, CNC machines, and logistic tools. These sensors are like human eyes, which monitor the process, and detect any abnormal situations. The information collected from those sensors is then transmitted to the DCS for centralized data processing through communication networks. The brain processes information and generates commands, based on algorithm and pre-set parameters. These commands are then sent to actuators (muscles/bones) through communication devices to execute the orders and maintain production flow. PLCs are small computer devices installed on machines or equipment on a factory assembly line, for manufacturing automation.

TCC and ATP Products: The company's product lines include its Train Control Center (TCC) product and its Automation Train Protection (ATP) system. An ATP essentially acts as the train over-speed protection mechanism, which collects real-time information like speed limit ahead, train operation status, line data, instructions from train control center, then combines with the train parameters to produce train protection curves. In case of any human errors, like driver's negligence at the red light, it applies emergency brakes automatically. TCCs are an on-ground control center at railway stations which monitors route condition, track status, train schedules, distance between trains, and the working status of other essential function devices, and then through logic calculation, generates control instructions and commands. The command information from the TCC is then transmitted to the ATP located on the locomotives/trains, through track circuits and electronic beacons located at various points along the railway line.

Nuclear Products: As the certified domestic automation control systems provider to the nuclear power industry in China, the company provides its HOLLiAS NMS product to China's nuclear power industry. The company's HOLLiAS NMS proprietary control systems are used in conventional islands for safety and operation control. Its safety control product for nuclear islands is undergoing development at its 50/50 joint venture with the PRC domestic nuclear operator, China Guangdong Nuclear Power Holdings Corporation.

Subway Products: The company provides its Surveillance Control and Data Acquisition (SCADA) system to China's subway market. SCADA is an open software platform to enable integrated and monitoring of necessary sub-systems of the subway, including the Power Supervisory Control and Data Acquisition System, Building Automatic System, Fire Alarm System, Platform Screen Door System, Access Control System, Closed Circuit Television, Passenger Information System, Passenger Train Information

System, and Alarm System.

Management and Control Integrated Solutions: The company also offers management and control integrated solutions. Its solutions are based on the HOLLiAS (Hollysys Integrated Industrial Automation System) platform, which includes features for the fourth generation of DCS and functions for the internet

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
