Abstracts

Human Genome Sciences Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Human Genome Sciences Inc. and its competitors. This provides our Clients with a clear understanding of Human Genome Sciences Inc. position in the [Pharmaceuticals and Biotechnology](#) Industry.

The report contains detailed information about Human Genome Sciences Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Human Genome Sciences Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Human Genome Sciences Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Human Genome Sciences Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Human Genome Sciences Inc. business.

About Human Genome Sciences Inc.

Human Genome Sciences, Inc. operates as a biopharmaceutical company. The company also has a pipeline of compounds in earlier stages of clinical development in oncology, immunology and infectious disease. Additional products are in clinical development by companies with which the company is collaborating.

Products

The company has three products in late-stage clinical development: BENLYSTA for systemic lupus, ZALBIN for chronic hepatitis C, and raxibacumab for inhalation anthrax. It also has financial rights to certain products in the GSK clinical pipeline.

GlaxoSmithKline (GSK) has advanced two of these products to Phase 3 clinical trials, darapladib for cardiovascular disease and Syncria for type 2 diabetes mellitus. In addition, the company has a portfolio of drugs in earlier stages of development, led by TRAIL receptor antibody mapatumumab in mid-stage development for cancer.

Clinical Programs

Late-Stage Products

BENLYSTA for systemic lupus and ZALBIN for chronic hepatitis C have met the primary efficacy endpoints of their pivotal Phase 3 trials.

BENLYSTA (belimumab)

BENLYSTA is a human monoclonal antibody that specifically recognizes and inhibits the biological activity of B-lymphocyte stimulator, or BLyS. BENLYSTA is being developed by the company and GSK as a potential treatment for systemic lupus under a co-development and commercialization agreement entered into in 2006.

ZALBIN (albinterferon alfa-2b)

ZALBIN (also known as JOULFERON) is a genetic fusion of human albumin and interferon alfa that was created using the company's proprietary albumin-fusion technology. ZALBIN is being developed by the company and Novartis for the treatment of chronic hepatitis C under a worldwide co-development and commercialization agreement. ZALBIN would be the brand name for albinterferon alfa-2b in the United States, and JOULFERON would be the brand name in the rest of the world. In January 2009, Novartis initiated a separate Phase 2b trial to explore various doses of ZALBIN administered monthly, in combination with ribavirin, in treatment-naïve patients with genotypes 2 and 3 chronic hepatitis C.

Raxibacumab

Raxibacumab is a human monoclonal antibody that specifically targets and blocks Bacillus anthracis protective antigen, which research has shown to be the facilitator of the deadly toxicity of anthrax infection. Raxibacumab represents a new way to address the anthrax threat.

Oncology Products

Mapatumumab (HGS-ETR1)

The company develops agonistic antibody therapies for cancer based on the TRAIL receptor apoptotic pathway. Mapatumumab is a human monoclonal antibody that specifically binds to the TRAIL receptor 1 and causes it to induce apoptosis in cancer cells.

Non-small cell lung cancer: A randomized Phase 2 trial of mapatumumab in combination with paclitaxel and carboplatin as first-line therapy is ongoing in patients with advanced non-small cell lung cancer (NSCLC).

Multiple myeloma: A randomized Phase 2 trial of mapatumumab in combination with bortezomib (Velcade) is ongoing in patients with advanced multiple myeloma. Multiple myeloma is a cancer of the plasma cells in bone marrow.

Hepatocellular cancer: The safety lead-in to a randomized Phase 2 trial of mapatumumab in combination with Nexavar (sorafenib) is ongoing in patients with advanced hepatocellular cancer.

IAP Inhibitors

In November 2009, the company announced the initiation of a Phase 1 trial of IAP inhibitor, HGS1029, as monotherapy in patients with advanced lymphoid tumors. The study's primary objectives include evaluation of safety and tolerability, and dose selection for Phase 2 trials. HGS1029 as monotherapy is also being studied in an ongoing Phase 1 study in patients with advanced solid tumors.

Strategic partnerships

The company has co-development and commercialization agreements with pharmaceutical companies for both of its products — GSK for BENLYSTA and Novartis for ZALBIN. Raxibacumab is being developed under a contract with the Biomedical Advanced Research and Development Authority (BARDA) of the Office of the Assistant Secretary for Preparedness and Response (ASPR), U.S. Department of Health and Human Services (HHS).

Significant Events

In December 2010, Adimab, Inc. had a research collaboration with Human Genome Sciences Inc. The two companies have initiated a research program whereby Adimab would utilize its proprietary discovery platform to identify human antibodies against one target selected by Human Genome Sciences. The agreement gives Human Genome Sciences the option to commercialize antibodies generated from the collaboration.

History

Human Genome Sciences, Inc. was founded in 1992.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
