Abstracts

InfoCast Corporation Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between InfoCast Corporation and its competitors. This provides our Clients with a clear understanding of InfoCast Corporation position in the Industry.

The report contains detailed information about InfoCast Corporation that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for InfoCast Corporation. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The InfoCast Corporation financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes InfoCast Corporation competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of InfoCast Corporation business.

About InfoCast Corporation

InfoCast Corp (the company) was incorporated in 1997. The company is an emerging company that has developed application solutions and the infrastructure to enable it to host its customized software application solutions that can be accessed remotely by businesses, their customers and employees. The company has developed the software solutions include: InfoCast Contact (Contact) - This virtual call center application solution permits businesses to service inbound and outbound customer calls at any time through a customer service representative who can be located anywhere. InfoCast e-Learning (e-Learning) - This e-Learning application permits corporate and academic learners to access training on-line, from anywhere, at any time.

In order to host its customized software applications, the company has established a strategically placed data center, located in Toronto, Ontario, and are completing the installation of a second data center in Chicago, Illinois. These data centers will deliver information to information users, including businesses and their employees and customers worldwide, in real-time, in any format - data, voice or animation, through satellite, cable or private or public telecommunications networks, including the Internet. The company is a development stage company.

The Company's Customized Software Applications

Infocast Contact Application

The traditional method of providing customer support has been to establish a call center whereby customer service representatives, located in a central "brick and mortar" facility, respond to incoming client inquiries or make outgoing calls via telephone banks. Typically, call centers are used for help desk functions, telemarketing, catalog order taking and debt collection.

The Contact application (a virtual call center application) the company has developed enables customer service representatives to be located anywhere, without having to be present at a central "brick and mortar" facility, and would allow a caller or customer to reach a trained customer service representative at any time, from almost anywhere. The Company's Contact application provides the technology that: converts a call from analog (voice) to digital (information) so it can be transported over a data line; routes a call from the caller to the appropriate customer service representative based on the needs of the caller and skills and availability of the customer service representative; provides the customer service representative with access to the business' database, including both product and caller specific information; and converts the call back into analog so the caller can communicate with the customer service representative, all of which would take place in a secure, supervised environment. The application that the company has developed would also support automated call distribution (routing) and interactive voice response (choosing options by pressing touch tone numbers on a phone), as well as forward-looking call center technologies such as unified messaging (combining voice mail, e-mail and facsimile) and web-based help desks.

The essential elements of the Contact application that the company have developed include: skills-based routing, which routes calls to the appropriate customer service representative based on predetermined parameters, such as language; secure access to a business' database, including both customer specific and product information; conversion of the call to and from digital and analog; and training and supervision of customer service representatives.

Virtual call centers allow customer service representatives to work from home, resulting in lower costs and greater employee satisfaction.

Infocast e-Learning Application

Traditionally, in order for a business to provide training to its employees, the business

would bring an on-site instructor to the business' offices and hold instructor-led classes. The e-Learning application that the company has developed provides access to: a group of tutors who are expert in their field and who would give guidance to learners in real time; a team that gives learners guidance with career development; a library of high quality courses in single units or as part of curriculum; and software tools to help busy faculty members develop or customize courses rapidly. The company's e-Learning application is expected to deliver skills-based interactive multimedia content to corporate, academic and retail learners.

Data Centers

In order to host its customized and third party software applications, the company is developing a network of strategically placed data centers. To date, it has completed the installation of one data center, and are completing the installation of a second data center. In addition to the hosting servers, each data center will provide customers with: physical security; uninterruptable power supply with optional generator backup; disaster recovery plan; guaranteed quality of service levels; help desk support; highly reliable Internet access; and network monitoring and supervision.

Competition

With respect to the e-Learning application the company competes with including SmartForce, DigitalThink, Inc. and click2learn.com, inc. With respect to the Contact application that the company has developed, competition currently consists of Cisco's IPCC, White Pajamas, WorldCom/Telephony@Work, Sprint - Echopass and Avaya. Competition may also exist within many traditional "bricks-and-mortar" call centers, including Convergis Corp. and APAC Customer Services Inc.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
