Abstracts

inTEST Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between inTEST Corp. and its competitors. This provides our Clients with a clear understanding of inTEST Corp. position in the [Semiconductor](#) Industry.

The report contains detailed information about inTEST Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for inTEST Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The inTEST Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your

company's decision-making processes.

In the part that describes inTEST Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of inTEST Corp. business.

About inTEST Corp.

inTEST Corporation engages in the design, manufacture, and marketing of mechanical, thermal, and electrical products that are used by semiconductor manufacturers in conjunction with automatic test equipment (ATE) in the testing of integrated circuits (ICs).

Segments

The company's business is managed as three segments: Mechanical Products, Thermal Products, and Electrical Products.

Mechanical Products

Manipulator Products: The company offers four lines of manipulator products: the in2, the M Series, the Aero Series, and the Cobal Series. The in2 and Cobal Series of manipulator products incorporate its balanced floating-head design. This design permits a test head weighing approximately 3,000 pounds. The M Series line of manipulator products consists of the M400 and M500 manipulators. These universal manipulators are designed to handle test heads weighing approximately 550 pounds. The Aero Series of manipulator products consists of the Aero 450H and Aero 150P manipulators. These manipulators are designed to handle test heads weighing approximately 1,500

pounds.

Docking Hardware Products: The company's docking hardware products protect the delicate interface contacts and ensure repeatable and alignment between the test head's interface board and the prober's probing assembly or the handler's test socket as they are brought together, or docked. The company's docking hardware products are used primarily with floating-head universal manipulators when maximum mobility and inter-changeability of handlers and probes between test heads is required.

Thermal Products

The company's thermal products are sold into the environmental test market encompassing various industries, including aerospace, automotive, communications, consumer electronics, defense, medical, and semiconductor industries. Its thermal products enable a manufacturer to test semiconductor wafers and ICs, electronic components and assemblies, mechanical assemblies, and electromechanical assemblies.

ThermoChuck Products: The company's ThermoChuck precision vacuum platform assemblies, used primarily in the semiconductor industry, change and stabilize the temperature of semiconductor wafers during testing without removing the wafer from its testing environment. ThermoChucks are incorporated into wafer prober equipment for laboratory analysis and for in-line production testing of semiconductor wafers.

ThermoStream Products: The company's ThermoStream products are used in the semiconductor industry as a temperature management tool, or in various electronic test applications as part of its MobileTemp systems. ThermoStream products provide a source of heated and cooled air which can be directed over the component or device under test. ThermoStreams provide a temperature-controlled air stream to change and stabilize the temperature of packaged ICs and other devices.

The company's MobileTemp Series combines its ThermoStream products with its family of high-speed ThermoChambers to offer thermal test systems with uniform temperature control in a package enabling temperature testing at the test location. MobileTemp Systems are designed specifically for small thermal-mass applications beyond the semiconductor market and have found application in the automotive, electronic, fiber optic, medical, and oil field service industries testing, such things as electronic sub-assemblies, sensor assemblies, and printed circuit boards. The company's customers use ThermoStream products in longer-run production applications.

Thermal and Humidity Chambers: The company's chamber products are available in various sizes, from small bench-top units to chambers with internal volumes 27 cubic feet and more and with temperature ranges of approximately -190 degrees Celsius to +500 degrees Celsius. Chambers can be designed to utilize liquid nitrogen or liquid carbon dioxide cooling or mechanical refrigeration, and sometimes both. These chambers can accommodate thermal masses and are found in both laboratory and production environments.

Thermal Platforms: The company's platforms are available in surface sizes ranging from 7.2 square inches to 396 square inches. They provid

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
