IPIX Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between IPIX Corp. and its competitors. This provides our Clients with a clear understanding of IPIX Corp. position in the Software and Technology Services Industry.

- The report contains detailed information about IPIX Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for IPIX Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The IPIX Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes IPIX Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of IPIX Corp. business.

About IPIX Corp.

IPIX Corporation provides imaging solutions for commerce, communication, and security applications. The company's solutions create, process, and manage a variety of media including still images, 360 degree by 360 degree immersive images and video.

Products

The company's solutions include cameras kits, software tools, services, infrastructure and training to support immersive imaging. Camera systems include all of the components necessary to capture immersive still photography or video.

The company's products enable users to create 360 degree photographic images or video through the use of a wide angle or fisheye lens. IPIX still photography or video content is either a 360 degree x 180 degree (hemispherical) view taken with a single shot, or a 360 degree x 360 degree view, taken by two back-to-back hemispherical shots. Its technology can also be used for approximately two shots to create higher resolution final content.

Immersive Video Products

The video product portfolio consists of three product lines with various configurations within each product line. The product lines are: CommandView, CommandView360, and InSight camera systems. The main camera electronics and fisheye lens optics have been designed to be used across the entire product line. These camera systems allow the user to view live and recorded video at user definable frame rates and compression settings to conserve bandwidth and storage requirements.

CommandView

The CommandView camera consists of a two or three mega-pixel sensor, a digital signal processor (DSP) module and a power distribution and communication module. CommandView utilizes the company's fisheye lens that has been optimized for the image sensor in the camera subassembly to provide an attractive video surveillance product offering to the security market. CommandView comes in multiple configurations: wall-mount, ceiling-mounted dome, and for low intrusive monitoring, a flush mount kit and recessed dome kit. CommandView provides complete and continuous situational awareness. The CommandView camera sees everything at the same time and monitors everything in its field of view with no blind spots. Users have the ability to pan-tilt-zoom on both live and recorded video with no moving parts, as well as remotely view and manage cameras from an off-site location.

CommandView360

CommandView360 utilizes two camera sub-assemblies, mounted back-to-back, and one fisheye lens on each camera to provide full 360 degree coverage of the area of concern. Full 360 degree coverage means the camera is monitoring in both the horizontal and vertical dimensions at the same time. This optical system integrates an optional off-the-shelf third party mechanical pan-tilt-zoom camera that has an optical zoom capability for long range target identification and tracking.

The CommandView360 software performs a mathematical calculation and sends the coordinates of the pixel that the operator 'mouse-clicked' on to the mechanical pan-tilt-zoom camera as positioning commands. The mechanical pan-tilt-zoom camera moves to the correct position to 'capture' the target and the operator then zooms in for close-up monitoring. The CommandView360 offers operators the ability to find a target anywhere within a three dimensional space—eliminating the guess work commonly associated with traditional mechanical pan-tilt-zoom cameras.

InSight

InSight is the company's entry-level digital camera system using the camera subassembly that forms the foundation of its entire product portfolio. This camera is capable of generating high resolution images at full motion frame rates that range from 15 frames per second to 48 frames per second, depending upon compression settings and number of users on the network. The product comes in two configurations. In the ceiling-mount configuration, the user may select a fixed or a directional camera mount. The directional mount allows the user to swivel the camera to adjust the direction in which the camera is pointed. The InSight camera may be mounted in a parapet or rampart enclosure for outdoor use.

Integration with Digital/Network Video Recording Solutions
