Ixia Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Ixia and its competitors. This provides our Clients with a clear understanding of Ixia position in the **Computers and Electronic Equipment Industry**.

- The report contains detailed information about Ixia that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for Ixia. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The Ixia financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Ixia competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Ixia business.

### About Ixia

Ixia provides converged test systems and services for wireless and wired infrastructures and services. The company's hardware and software allow its customers to test and measure the performance, functionality, service quality and conformance of wireless and wired Internet Protocol (IP) equipment and networks, and the applications that run over them.

The company's solutions generate, capture, characterize, and analyze realistic network and application

traffic, identifying problems, assessing performance, ensuring functionality and interoperability, and verifying conformance to industry specifications. It offers hardware platforms with interchangeable media interfaces, utilizing a common set of applications, application programming interfaces (APIs) and automation tools that allow its customers to create integrated automated test environments. The networks that its systems analyze primarily include Ethernet networks operating at speeds of approximately 100 gigabits per second and wireless networks that carry data traffic over optical fiber, electrical cable and airwaves. It also offers hardware platforms and equipment that test wireless equipment, especially those associated with 3G (third generation), 4G (fourth generation) and Long-Term Evolution (LTE) networks. Customers also use its suite of software applications to test and verify Web, Internet, security, and business applications.

## Products

The company's test systems consist of hardware and software products that allow its customers to test and measure the performance, functionality, interoperability, service quality, and conformance of their wireless and wired IP equipment and networks, and the applications that run over them. Its hardware platform consists primarily of interchangeable interface cards which fit into multi-slot chassis. The company's chassis are metal cases that incorporate a computer, a power supply, and a backplane which connects the interface cards to the chassis. Its software applications and APIs allow its customers to create and manage integrated automated test environments.

The company's customers can utilize its systems either in test labs or within networks. Its systems are operated through standard computer peripheral devices, including a monitor, keyboard, and mouse. The company's customers configure its systems based on the specific interfaces of the equipment being tested.

## Chassis

The company's primary chassis, the 12-slot XM12, provides a high density test platform. Operating in conjunction with its test applications, the XM12 provides the foundation for a test environment. An array of interface modules are available for the XM12. The chassis supports approximately 192 Gigabit Ethernet ports, 96 10 Gigabit Ethernet ports, 12 40 Gigabit Ethernet ports and 6 100 Gigabit Ethernet ports, and 24 Packet over SONET (POS) or Asynchronous Transfer Mode (ATM) ports. These modules provide the network interfaces and distributed processing resources needed for executing a range of data, signaling, voice, video, and application testing from layers 2-7 of the network stack. The IxN2X product line offers a four-slot chassis or portable two-slot chassis. Interfaces are available for 10 Mbps through 10 Gbps Ethernet, SONET/SDH, POS, ATM, and Frame Relay. The IxCatapult product line utilizes three different chassis types. The m500 chassis offers 16 slots for testing 2G, 3G and LTE network components. The t600 chassis holds specialized cards used for LTE sector testing. The optional r10 radio head can be used to generate radio frequency (RF) signals for LTE eNode B testing.

## Interface Cards

The company offers various optical and electrical interface cards. Its interface cards contains from one to 16 independent traffic generation and analysis ports. These ports operate at wire speed, the maximum rate that data traffic can be transmitted over a network medium. Each port on each interface card has a transmit stream engine that is used to generate packets of information and a real-time receive analysis engine capable of analyzing the packets as they are received. The transmit stream engine generates IP data packets or continuous test seq

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
