Abstracts

The LGL Group, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between The LGL Group, Inc. and its competitors. This provides our Clients with a clear understanding of The LGL Group, Inc. position in the [Electrical Equipment](#) Industry.

The report contains detailed information about The LGL Group, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for The LGL Group, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The The LGL Group, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes The LGL Group, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of The LGL Group, Inc. business.

About The LGL Group, Inc.

The LGL Group, Inc., through its subsidiaries, engages in the manufacture and marketing of custom-designed engineered electronic components that are used primarily to control the frequency or timing of signals in electronic circuits.

The company operates through its principal subsidiary, M-tron Industries, Inc., which includes the operations of M-tron Industries, Ltd. (Mtron), and Mtron's subsidiaries Piezo Technology, Inc. and Piezo Technology India Private Ltd (jointly, PTI).

The company's devices, which are commonly called frequency control devices, are used in infrastructure equipment for the telecommunications and network equipment industries. Its devices are also used in electronic systems for military applications, avionics, earth orbiting satellites, medical devices, instrumentation, industrial devices, and global positioning systems.

Products

The company's products are frequency control devices, including packaged quartz crystals, oscillators incorporating those crystals, and electronic filter products. The Packaged Crystal is a single crystal in a hermetically sealed package and is used by

electronic equipment manufacturers, along with their own electronic circuitry, to build oscillators for frequency control in their electronic devices. The Clock Oscillator is a self-contained package with a crystal and electronic circuitry that is used as a subsystem by electronic equipment manufacturers to provide frequency control for their devices. The Voltage Controlled Crystal Oscillator (VCXO) is a variable frequency oscillator whose frequency can be changed by varying the control voltage to the oscillator. The Temperature Compensated Crystal Oscillator (TCXO) is an oscillator designed for use over a range of temperatures. Oven-Controlled Crystal Oscillators are designed to produce a much higher level of stability over a range of operating conditions with very low phase noise. The Electronic Filters use either crystal technology or precise manufacturing of inductive/capacitive circuits to provide filters with defined capabilities to filter out unwanted portions of a timing signal.

The company's oscillator products operate at frequencies ranging from 2 kilohertz to approximately 1.4 gigahertz. It offers crystal and inductive/capacitive filters with central frequencies from a direct current to 15 gigahertz. Majority of its products are custom-designed for requirements of specific original equipment manufacturer (OEM) systems.

The company's products are employed in various applications within the communications industry, including computer and telephone network switches, high-speed gigabit Ethernet, modems, wireless transmitters/receivers, multiplexers, data recovery/regeneration devices, fiber channel networks, repeaters, data transceivers, line interface devices, communications satellites, and base station controllers. Its products are incorporated into end products that serve various elements of the communications industry. The crystals, oscillators, and filters intended for non-communications applications are found in military applications for remote sensing, personnel protection and armaments. Avionics applications include ground and flight control systems. Industrial applications are in security systems, metering systems, electronic test instruments and industrial control systems. The company's products are also used in medical instrumentation applications, as well as in computer peripheral equipment, such as storage devices, printers, modems, monitors, video cards, and sound cards.

The company's timing module, an electronic subsystem, is a pre-assembled circuit that integrates different functions into a small, single, self-contained module for control of timing in a circuit. Timing modules are frequently used for the synchronization of timing signals in digital circuits, particularly in wireless and optical carrier network systems.

Markets

The company's operations are located in Orlando, Florida, Yankton, South Dakota, and Noida, India. In addition, it has a sales office in Hong Kong. It has international customers located in Malaysia, China, Canada, Thailand, Singapore, and Mexico.

Customers

The company markets and sells its frequency control devices primarily to original equipment manufacturers of communications, networking, military, avionics, instrumentation and medical equipment; contract manufacturers for OEMs; and distributors who sell to OEMs and contract manufacturers.

Competition

The company's competitors include Vectron International (a division of Dover Corporation); CTS Corporation; K&L (a division of Dover Corporation); and Saronix (a division of Pericom Semiconductor Corporation).

History

The LGL Group, Inc., formerly known as Lynch Corporation, was founded in 1917.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
