The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Lietuvos Energija AB business.

About Lietuvos Energija AB

Lietuvos Energija AB engages in the electricity generation, transmission, and distribution. The company operates high voltage transmission lines and substations and ensures electricity transmission from Lithuanian power plants to electric distribution utilities and large customers.

Lietuvos Energija is one of the constituent parts in the parallelly operating power systems of the Baltic States, Russia and Belarus, and manages energy flows vitally important to both industry and households.

The company owns 222 transformer substations and switchyards, more than 6,000 kilometres of 330kV and 110 kV electric lines, the Kaunas Hydro Power Plant and the Kruonis Pumped Storage Plant.

The company controlled transmission system is interconnected by four electric lines with Latvia, five with Belarus and three with Russia. One of the main objectives of Lietuvos Energija is the integration of Lithuania's power system into the Western European electricity market along with the development of regional co-operation. Expansion of the transmission grid is planned in the near future by interconnecting it with the Polish electricity system. The Lithuanian-Polish interconnection project is of

immense importance for the development of an integrated EU electricity market and for the improvement of the reliability of supply. By utilizing the common capabilities of the power systems of the Baltic States, establishment of the Common Baltic Electricity Market needed for successful integration of the Baltic States into the electricity markets of Western Europe and the Nordic countries is projected.

ITT centre Print

In 2001, the Department of Information Technologies and the Communications & Teleinformation Service were merged together, and the Information Technologies & Telecommunications Centre (ITTC) was established.

One of the core activities of the ITT Centre the development, maintenance and support of application systems designed for the power system. The main advantage of the centre in this field is a thorough knowledge of the power system's structure and other business particularities. The application systems assigned to the main processes in the energy sector, financial accounting and management reporting have been implemented in Lietuvos Energija as well as in the distribution and power production companies.

The main services provided by the ITTC to its external customers are: Data transmission services; Internet services and Collocation services.

Data transmission service Print

Lietuvos Energija specialists in ITT analyse the specific needs of a customer and provide the customer with the best solution for high-capacity data transmission.

Internet services Print

Lietuvos Energija AB supplies wholesale Internet services using a 155 Mbps capacity channel connected up to the networks of international Internet service providers.

The reliability of services is entirely based on fibre optical transmission, high credibility of SDH data transmission, Cisco Systems commutation equipment and back-up international Internet channels. Depending on the chosen capacity of the Internet channel, the method in which the service would be rendered (leased lines or broadband access) is selected.

Upon the customer's request additional services can be provided: E-mail services; Web

server collocation services; Hosting of dedicated Web servers; High-speed connection to Lithuania's Internet exchange point, assignment of fixed IP addresses and Support and servicing of domains.

Collocation services Print

Lietuvos Energija AB provides collocation services of technical facilities the company rents space for hosting the customer's IT and telecommunications equipment.

The rental services assigned for telecommunication operators and service providers include:

The company also provides data centre services in premises equipped at high technical standards. The data centre services include: Space for racks; Racks; Space in the racks; Maintenance services 24x7.

Joint Venture

The company, in May 2008, and PSE-Operator S.A established a joint venture in Warsaw, called LitPol Link. Lietuvos Energija and PSE Operator would each hold 50% interest in the joint venture. PSE-Operator SA. and Lietuvos Energija AB, in June 2008, have transferred funds to the account of LitPol Link. The joint capital would serve to build an energy link between the power systems of the two countries.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
