Abstracts

Logimetrics Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Logimetrics Inc. and its competitors. This provides our Clients with a clear understanding of Logimetrics Inc. position in the Industry.

The report contains detailed information about Logimetrics Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Logimetrics Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Logimetrics Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Logimetrics Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Logimetrics Inc. business.

About Logimetrics Inc.

LogiMetrics, Inc., a Delaware corporation incorporated in 1968 (LogiMetrics and together with its wholly owned subsidiary, mmTech, Inc., the Company), designs, manufactures and markets solid state, broadband wireless communications infrastructure equipment, subsystems and modules that enable point-to-multipoint (PMP) and point-to-point (PTP) terrestrial and satellite-based wireless telecommunications services in frequency bands from 15 GigaHertz (GHz) to 38 GHz. The Company's products allow telecommunications service providers to provide cost-effective data, voice and video communications links to their customers. The Company's products include solid-state power amplifiers, hub transmitters, receivers and transceivers, active repeaters, cell-to-cell relays, Internet access systems and other modules and subsystems.

Products

The Company produces equipment that is used to implement broadband wireless services operating in the millimeter wave frequency spectrum. These services include both terrestrial and Ka-band satellite applications.

The Company's products include transmitters, receivers and radios. In addition, the

Company manufactures and sells modules and subsystems, such as amplifiers, mixers, filters, upconverters and downconverters. In many cases, these products are designed by the Company to meet the requirements of a specific customer, and are generally sold to system integrators. The Company also manufactures and sells after market directly to service providers. For example, the Company sells a series of repeaters for use in overcoming line of sight problems encountered by high frequency systems. The repeater acts as a beam bender by re-4 transmitting the signal to allow the service provider to supply service to customers beyond the line of sight capability of a particular transmitter without the cost of adding additional base stations. A repeater may also be used as a cell extender to reach customers that are beyond the range of a base station's coverage pattern. This often occurs when a base station is installed in the middle of a metropolitan area and potential prime customers with high bandwidth usage requirements, such as industrial plants, are located in areas outside the metropolitan area and beyond the range of the base station.

A partial list of the Company's broadband wireless products follows:

Radios: Base station radios for PMP applications in frequency bands from 24 GHz to 38 GHz transmit and receive data and voice directly through wireless connection to many subscribers from a single point PTP radios for high capacity applications link a single customer needing high bandwidth to a data network

Millimeter Wave Amplifiers: Low noise and high power amplifiers (up to 10 Watts) increase signal power levels.

Millimeter Wave Filters: Filters control the frequency of various signals within a system.

Active Repeaters: Repeaters transmit PMP system signals around obstacles and act as cell extenders to increase the capacity of a cell without the expense of additional radios.

Antennas: Antennas transmit and receive high frequency signals.

Upconverters, Downconverters and Other Subassemblies: Components process and reconfigure signal characteristics for specific applications.

Customers

The Company's customers include system integrators that assemble complete communications systems for service providers, alternative and foreign service providers

that build and operate broadband wireless telecommunications networks and universities that purchase small quantities of specially designed millimeter wave components or subsystems for scientific experiments. In addition, the Company supplies Ka-band satellite modules and subassemblies to the United States government and several satellite system integrators. The Company also supplies systems for niche applications.

Competition

Subsystem and module manufacturers with whom the Company competes include companies such as Remec, Inc., Endwave Corp. and Quinstar Technology, Inc.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
