Abstracts

Medisys Technologies, Inc Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Medisys Technologies, Inc and its competitors. This provides our Clients with a clear understanding of Medisys Technologies, Inc position in the Industry.

The report contains detailed information about Medisys Technologies, Inc that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Medisys Technologies, Inc. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Medisys Technologies, Inc financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Medisys Technologies, Inc competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Medisys Technologies, Inc business.

About Medisys Technologies, Inc

Medisys Technologies Inc. (Company) is a development stage Utah Corporation focused on the commercialization of CoverTip™ hypodermic safety syringe and other sharps related medical devices. The Company owns a total of 20 U.S. and foreign patents covering medical safety devices and other products that offer proprietary, high-potential technology, and has additional patent applications pending for its medical devices in both the U.S. and overseas.

Medical Device Safety

CoverTip™ Hypodermic Syringe

The CoverTip™ Hypodermic Safety Syringe not only provides benefits over standard intramuscular (IM) syringes, but addresses each of the major issues associated with current safety syringes. The superiority of the CoverTip™ Safety Syringe exits in its conformity to unique, but simple, design criteria for safety, ease of use and cost. First, the window of opportunity for an accidental needlestick is virtually eliminated. The CoverTip™ device employs a design that provides protection from the sharp needle tip prior to withdrawal from the patient's skin, protecting the healthcare worker during the drug delivery process, as well as during the disposal of the used syringe. Secondly, the

device is easy to use with little or no additional training for the health care worker. Third, the device is fail-safe by relying entirely on positive mechanical action rather than on buttons, releases, springs, vacuums, or other such complicated additional steps.

PreSaf™ Lever Fulcrum Hypodermic Syringe

PreSaf™ is an intramuscular injection safety syringe designed primarily for pre-filled syringe application, which allows medication to be injected into the patient directly from a pre-filled vial. The pre-filled vial containing fluid medication is an existing component used by many pharmaceutical manufacturers. These applications typically include flu shots, pneumonia shots, AIDS serums, and other epidemic treatment or prevention therapies. Like Covertip™, PreSaf™ provides automatic passive protection before withdrawal from the patient's skin. This device will be marketed as an OEM product and sold to pharmaceutical distribution producers of prefilled syringes.

Diagnostic Sharps Safety

The Company recognizes that diagnostic sharps applications are a critical area of medical device safety. These products address a somewhat different customer base than the hypodermic end-user. Physicians and other more specialized technicians are the primary end-users of diagnostic sharps instruments.

VacuSaf™

This device, using CoverTip™ technology, covers and protects the sharp of a blood collection needle while it is still in the vein. The device provides protection to the user and waste handlers and produces the added benefit of protecting the vein lumens during the collection procedure. Version "Select" permits selection of needle gauge for use with a single adaptive shroud, while version "Fixed" is a pre-assembled unit, and safety mechanism, fixed to the shroud.

SofDraw™

SofDraw™ is a blood/fluid collection syringe designed to protect the clinician from an accidental self-puncture with a contaminated needle during the collection of blood or bodily fluids and through the transfer of fluids into vials for transport and study. Current procedures use standard syringes, usually 15cc or larger, as the operator either draws blood or aspirates fluid. Fluid aspiration is typically performed by physicians or other highly specialized technicians. In either case, the skin of the patient is punctured and,

after collection, the contaminated needle is withdrawn with the sharp exposed. Transferring the fluid into vials involves multiple opportunities for accidental self-puncture.

The Company intends to market this specialized product directly to both OEM blood and fluid collection tray assemblers and specialty markets, such as physicians and phlebotomists. Orthopedists will be a specific target customer group for the use of SofDraw™ during the drainage of knee and shoulder joints.

AmnioSaf™

This safety syringe device is designed to protect both the physician and the fetus during amniocentesis. Protection of the fetus is provided through redu

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
