The Ness Technologies Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to

profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Ness Technologies Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Ness Technologies Inc. business.

About Ness Technologies Inc.

Ness Technologies, Inc. provides information technology (IT) services and business solutions in North America, Europe, Israel, and the Asia Pacific. The company focuses on software product engineering, system integration, application development and consulting, and software distribution.

Service Offerings

The company offers three primary service lines, including software product engineering; system integration, application development and consulting; and software distribution. It delivers these services and solutions using a global delivery model combining offshore, near-shore and local teams.

Software Product Engineering

The company offers software product research and development services through a specialized business unit called Software Product Labs. It offers product life cycle expertise, including requirements analysis, architecture and design, coding, testing and quality assurance, release automation, maintenance, professional services, support,

porting and migration. The company also provides management consulting and process transformation services related to the globalization of software product research and development.

The company functions as a partner with its clients in the ongoing software product life cycle services it provides to them, including through their transition to a global software development model. During the transition, the company manages their tactical needs at all phases of the globalization process. During the 'build' phase, the company provides strategic consulting.

System Integration, Application Development and Consulting

The company offers a set of IT services to its clients in the area of system integration, application development and consulting. It provides these services in 18 countries throughout North America, Europe, Israel, and the Asia Pacific. The company delivers the services through a global delivery model that includes local teams, as well as offshore and near-shore resources. The company provides these services for a range of clients in selected verticals, including utilities and public sector, financial services, defense and homeland security, life sciences and healthcare, and others.

The services the company offers include enterprise resource planning and customer relationship management solutions; business intelligence and data warehousing systems; document management and knowledge management solutions; enterprise application integration solutions; proprietary and solutions; command and control and real-time systems; geographic information systems; telecommunications systems; IT outsourcing; strategic consulting services; quality assurance, testing and user interface engineering; and training and user assimilation services designed to produce business solutions with user acceptance.

Enterprise Resource Planning (ERP) and Customer Relationship Management (CRM) Solutions: ERP and CRM systems are integrated application software packages designed to support multiple business functions. The company offers a range of ERP and CRM solutions and services, including needs analysis, product selection and differentiation analysis, solution design, installation and administration, product adjustment and customization, data transfer from original information systems, integration with other systems, including business partner systems, end-user and administrator training, manual production and routine operational support, including upgrades and ongoing development. The company's client service teams provide support activities, such as localization, basis team infrastructure, training and delivery of

complementary products. The company's solutions and expertise include supply chain management, supplier relationship management and life cycle management. The majority of its ERP and CRM engagements use SAP, Oracle Applications, and PeopleSoft.

Business Intelligence (BI) and Data Warehousing: The company enables organizations to develop information systems for turning data into business intelligence. The company's BI and data warehousing solutions include clinical trials management systems and scientific data management systems utilized in the research and d

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
