The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of New Guinea Gold Corp. business.

About New Guinea Gold Corp.

New Guinea Gold Corporation engages in the acquisition, exploration, development and operation of mineral properties in Papua New Guinea (PNG).

Mineral Properties

The company has various interests in six exploration projects in Papua New Guinea through its wholly owned subsidiary New Guinea Gold Ltd and its associated company Pacific Kanon Gold Corporation. It has a 90% interest in one, a 100% interest in two of the projects, and a 20% interest, a 50% interest and a 10% interest in the other three properties. The company is conducting operations on the Sinivit, Normanby, Sehulea, and Mt. Penck projects. The Mt Penck property is in West New Britain Province, Papua New Guinea. The Weioko Gold Project is a key gold project and part of the Sehulea Property (100%).

Sinivit

The Sinivit Property, on which the company has begun commercial production of an open-cut vat leach processing mine, is held under three titles in which New Guinea Gold has a direct 90% equity interest and a further 2.5% indirect equity interest. The Sinivit

property also includes an exploration license that covers approximately 43 square kilometres.

Normanby

The Normanby Licence covers approximately 68 square kilometres on Normanby Island, Milne Bay Province. The Imwauna project is located within the Normanby Property, south-east Papua New Guinea. The company owns 100% of this property. Imwauna is a gold project. Fergusson Property is on Fergusson Island, an island adjacent to NGG's Imwauna property on Normanby Island.

Sehulea

The Sehulea Project covers approximately 30 square kilometres in the eastern part of Normanby Island, in Milne Bay Province, adjacent to the Normanby Project. It earned a 20% interest in the Mt. Penck property. The Mt. Penck exploration license covers 102.6 square kilometres in area and is 55 kilometres west of Kimbe in the West New Britain Province.

The company has optioned various projects, including Feni, Crater Mountain, and NSR and production bonus in respect of certain Mineral Properties.

Feni

Vangold Resources Ltd. (Vangold), has earned a 50% interest and been granted the right to earn an additional 25% interest.

Crater Mountain

The company has a 10% free carried interest.

NSR and production bonus in respect of certain Mineral Properties

Five of the six projects, Sinivit, Normanby, Sehulea, Feni, and Crater Mountain are each subject to a 1% net smelter royalty payable to Macmin.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
