The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Norske Skogindustrier ASA business.

About Norske Skogindustrier ASA

Norske Skogindustrier ASA engages in the manufacture, distribution, and sale of publication paper, which includes newsprint and magazine paper. As of December 31, 2008, the company owned and operated 16 fully and partly owned mills in Europe, South America, Australasia, and Asia.

SEGMENTS

The company operates in three segments: Newsprint, Magazine Paper, and Energy

Newsprint

The Newsprint Segment encompasses production and sale of paper qualities which, measured in grams per square meter, would normally be in the range 40-57 g/m². These paper qualities are used in newspapers, inserts and advertising materials. The company has an annual production capacity of newsprint of 3 723 000 tonnes as of December 31, 2008.

Magazine Paper

The Magazine Paper Segment encompasses production and sale of the paper qualities super calendered (SC), machine finished coated (MFC) and lightweight coated (LWC). These paper qualities are used in magazines, catalogues and advertising materials. The company has an annual production capacity of magazine paper of 1 465 000 tonnes as of December 31, 2008.

Energy

The Energy Segment includes purchase and sale of energy to the Norwegian entities in the company, sale of excess energy in the spot market and the fair value of certain energy contracts and embedded derivatives in energy contracts.

PRODUCTS

Norcote: Norcote is a lightweight coated (LWC) paper is produced in various variants with standard and improved brightness levels, gloss or matt finish and a selection of basis weights for printing magazines, catalogues, promotion materials and other commercial literature. Norcote is used in magazines, catalogues, supplements, direct mail, and inserts/flyers.

Directory paper: Directory paper is produced in Australasia and South America. This is a lightweight paper used for telephone directories and catalogues.

Norsc: The company's SC (super calandered) paper is an uncoated publication paper suitable for magazines, catalogues and advertising material. It produces an SC paper designed for either rotogravure or heat set Web offset printing. This is used in magazines, catalogues, inserts/flyers, direct mail, and supplements.

Norbright, Norstar, and NorX: This product range embraces paper grades suited for both cold set and heat set Web offset printing. The feel and appearance of these products are different from newsprint in terms of brightness and bulk. This product range is used in supplements, inserts/flyers, direct mail, newspapers, freesheets, directories, magazines, and books.

Norset: Machine finished coated (MFC) is a film-coated publication paper with a combination of bulkiness and printability in heat set Web offset. This is used in newspapers, free-sheets, directories, supplements, and insert/flyers.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
