Abstracts

ON Semiconductor Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between ON Semiconductor Corp. and its competitors. This provides our Clients with a clear understanding of ON Semiconductor Corp. position in the [Semiconductor](#) Industry.

The report contains detailed information about ON Semiconductor Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for ON Semiconductor Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The ON Semiconductor Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes ON Semiconductor Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of ON Semiconductor Corp. business.

About ON Semiconductor Corp.

ON Semiconductor Corporation engages in the design, manufacture, and marketing of semiconductor components that addresses the design needs of electronic systems and products. The company supplies power, analog, digital signal processing, mixed signal, advanced logic, data management semiconductors, memory, and standard component devices.

The company's power management semiconductor components control, convert, protect and monitor the supply of power to the different elements within various electronic devices. Its custom application specific integrated circuits use analog, digital signal processing, mixed-signal and advanced logic capabilities to act as the brain behind its automotive, medical, military, aerospace, consumer and industrial customers' products. Its data management semiconductor components provide clock management and data flow management for precision computing and communications systems. The company's standard semiconductor components serve as 'building block' components within various electronic devices.

Segments

The company operates in four segments: Automotive and Power Regulation; Computing

and Consumer Products; Digital and Mixed-Signal Products; and Standard Products.

Automotive and Power Regulation Group: This segment supplies power management analog products, power MOSFETs and mixed-signal sensor interface products for the automotive, computing, and portable markets. The company has a portfolio in various product categories, which include; automotive-grade low-dropout (LDO) voltage regulators, automotive-grade drivers, automotive-grade ignition IGBTs and MOSFETs, and power MOSFETs, LDOs, and voltage regulators for computing, portable, and automotive applications.

Computing and Consumer Products: The Computing and Consumer Products Group focuses on delivering power efficient analog IC solutions for power management in VCORE, DDR, and chipsets for audio, video, and graphics processing subsystems. Additionally, the company provides AC to DC conversion solutions for the power supplies in computing and consumer applications.

Digital and Mixed-Signal Products Group: The Digital and Mixed-Signal Products Group designs and develops analog, mixed-signal, and advanced logic application-specific integrated circuit (ASIC) and application-specific standard product (ASSP) solutions for the medical, military/aerospace, consumer, and industrial markets.

The company's Medical Products business develops integrated circuits used in defibrillators, pacemakers, neurostimulators, hearing health applications, glucose meters, and patient monitoring products, as well as consumer and industrial audio products.

The Custom Industrial and Timing Products business is focused on mixed-signal ASICs and ASSPs for industrial, medical imaging, computing, and consumer applications, as well as clock and timing management products for industrial, communications, and consumer applications. The company's PureEdgephase lock loop (PLL) family includes low noise jitter clock synthesizers and clock modules that are targeted at replacing traditional crystal oscillators. The acquisition of PulseCore Semiconductor increased this portfolio by adding new capabilities in active electromagnetic interference (EMI) protection and optimization utilizing spread-spectrum clocking technology.

The company's Digital ASIC, Mil/Aero and Image Sensors business engages in mid-range (above 90nm) standard-cell ASICs and FPGA conversions for the military/aerospace, communications, computing, and consumer markets. The business also develops CMOS linear image sensors and ambient light sensors for industrial and

consumer applications.

Standard Products Group: The company serves a base of end-user markets, including consumer electronics, computing, wireless and wired communications, automotive electronics, industrial electronics, and medical via four discrete semiconductor technology categories, diodes and transistors, configurable analog products, LED drivers, and non-volatile memories (EEPROMs).

The discrete and integrated semiconductor products that the company offers with in these categories perform multiple application functions,

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
