Abstracts

Park Electrochemical Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Park Electrochemical Corp. and its competitors. This provides our Clients with a clear understanding of Park Electrochemical Corp. position in the [Computers and Electronic Equipment](#) Industry.

The report contains detailed information about Park Electrochemical Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Park Electrochemical Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Park Electrochemical Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Park Electrochemical Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Park Electrochemical Corp. business.

About Park Electrochemical Corp.

Park Electrochemical Corp., through its subsidiaries, operates as an advanced materials company, which engages in the design, development, manufacture, marketing, and sale of digital and RF/microwave printed circuit materials products principally for the telecommunications and Internet infrastructure and high-end computing markets; and advanced composite materials products and composite parts and assemblies products principally for the aerospace markets.

PRINTED CIRCUIT MATERIALS

Operations

The company is a designer and producer of advanced printed circuit materials used to fabricate complex multilayer printed circuit boards and other electronic interconnection systems, such as multilayer back-planes, wireless packages, high-speed/low-loss multilayers, and high density interconnects (HDIs). Its multilayer printed circuit materials consist of copper-clad laminates and prepregs. Multilayer printed circuit boards and interconnect systems are used in advanced electronic equipment to direct, sequence and control electronic signals between semiconductor devices (such as

microprocessors and memory and logic devices), and passive components (such as resistors and capacitors) and connection devices (such as infra-red couplings, fiber optics, compliant pin and surface mount connectors).

The company's digital printed circuit materials' end uses include high speed routers and servers, storage area networks, supercomputers, laptops, satellite switching equipment, cellular telephones and transceivers, wireless personal digital assistants (PDAs), and wireless local area networks (LANs). Its radio frequency (RF) printed circuit materials are used primarily for military avionics, antennas for cellular telephone base stations, automotive adaptive cruise control systems, and avionic communications equipment.

Products and Services

The company's products include high-speed, low-loss, engineered formulations, high-temperature modified epoxies, phenolics, bismalimide triazine (BT) epoxies, non-MDA polyimides, enhanced polyimides, SI (Signal Integrity) products, cyanate esters, and PTFE formulations for radio frequency (RF)/microwave applications.

The company's printed circuit materials consist of high-speed, low-loss materials for digital and RF/microwave applications requiring lead-free compatibility and high bandwidth signal integrity, BT materials, polyimides for applications that demand high thermal performance, cyanate esters, quartz reinforced materials, and PTFE and modified epoxy materials for RF/microwave systems that operate at frequencies approximately 77 GHz.

Customers and End Markets

The company's customers for its advanced printed circuit materials include the independent printed circuit board fabricators, electronic manufacturing service (EMS) companies, electronic contract manufacturers (ECMs), and major electronic original equipment manufacturers (OEMs) in the computer, networking, telecommunications, transportation, aerospace, military, and instrumentation industries located throughout North America, Europe, and Asia. Its major customers are Sanmina-SCI Corporation and TTM Technologies, Inc.

ADVANCED COMPOSITE MATERIALS

Operations

The company also develops and produces engineered, advanced composite materials for the aerospace, fixed and rotary wing aircraft, rocket motor, radio frequency (RF), and specialty industrial markets. Its advanced composite materials are manufactured by its Park Aircraft Technologies Corp. subsidiary located in Newton, Kansas, by its Park Advanced Composite Materials, Inc. subsidiary located in Waterbury, Connecticut, and by its Nelco Products Pte. Ltd. subsidiary in Singapore.

Products

The company manufactures various products, including primarily thermoset curing prepregs. Its advanced composite materials products include prepregs manufactured from proprietary formulations using modified epoxies, phenolics, polyesters, cyanate esters and polyimides combined with woven, non-woven, and unidirectional reinforcements. Reinforcement materials used to produce the company's products include polyacrylonitrile (PAN) based carbons, aramids, E-glass, S2 glass, polyest

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
