Abstracts

Quest Software Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Quest Software Inc. and its competitors. This provides our Clients with a clear understanding of Quest Software Inc. position in the [Software and Technology Services](#) Industry.

The report contains detailed information about Quest Software Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Quest Software Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Quest Software Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Quest Software Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Quest Software Inc. business.

About Quest Software Inc.

Quest Software, Inc. engages in the design, development, marketing, distribution, and support of enterprise systems management software products. The company licenses its software products, principally on a perpetual basis, and provides support, maintenance and implementation services for these products.

Segments

The company's segments are Licenses and Services. The Licenses segment develops, and markets and sells licenses to use, its software products. The Services segment provides post-sale support for software products and fee-based training and consulting services related to its software products.

Products

The company markets products grouped along four main categories: Application Management, Database Management, Windows Management, and Virtualization Management.

Application Management

The company's Application Management products are geared to support the spectrum of professionals. The primary focus of these products is to automate the tasks performed by the IT organization to manage the complexity of the application lifecycle. The company's primary product for Application Management is Foglight, while its Stat, JClass, PerformaSure, and JProbe products, the latter two focused on Java applications, comprise the remainder of its offerings.

Foglight. Foglight provides a view of applications to proactively detect and diagnose the root cause of performance and availability problems in a priority that makes sense to the business. Foglight correlates relationships from multiple sources and maps the metrics into a dashboard.

JProbe: JProbe is an enterprise-class Java profiler, which provides intelligent diagnostics on memory usage, performance and test coverage, allowing developers to pinpoint and repair the root cause of application code performance and stability problems that obstruct component and integration integrity.

PerformaSure: PerformaSure reconstructs the execution path of end-user request transaction. It combines transactional data with infrastructure metrics to help development and QA teams measure and analyze Java enterprise application performance. PerformaSure integrates with JProbe to support performance testing and tuning down to the line of code.

Perspective (PacketTrap): Perspective provides performance management and monitoring across the network to identify bottlenecks and help solve traffic issues reducing the mean-time-to-resolution of network incidents.

Stat ACM: Stat ACM (Application Change Management) helps IT managers lower their PeopleSoft and Oracle E-Business Suite total cost of ownership by providing change management and version control. It helps keep up with change configurations and customizations so that they are updated, approved and deployed to instances throughout the application implementation lifecycle.

Database Management

The company's market database management products support the needs of database developers and DBAs by providing domain capabilities and cross-platform productivity tools within an integrated console.

Database Development: These tools improve the productivity and capability of database developers working in the Oracle Procedural Language (PL)/SQL environment. The primary products in this product family are TOAD and SQL Navigator. The company provides an integrated development environment for coding stored procedures, schemas and SQL scripts from one graphical user interface. Debugging, SQL tuning, change analysis, and general administration features improve the quality and performance of database applications before they enter production.

The Quest Central product family for Oracle, SQL Server, DB2 and Sybase: Administering heterogeneous database systems in production involves many tedious, error-prone and repetitive tasks. To streamline and automate these tasks, the company has developed the Quest Central product family. Quest Central is a suite of tools that enables the DBA to identify the cause of performance problems without manual trial and error or decentralized tools. These products provide details on historical performance analysis and metrics to provide insight as to how performance issues occur. The company i

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
