Rad Source Technologies Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Rad Source Technologies Inc. and its competitors. This provides our Clients with a clear understanding of Rad Source Technologies Inc. position in the Healthcare Equipment/Supplies Industry.

- The report contains detailed information about Rad Source Technologies Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.
- Another part of the report is a SWOT-analysis carried out for Rad Source Technologies Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.
- The Rad Source Technologies Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.
- In the part that describes Rad Source Technologies Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.
- Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Rad Source Technologies Inc. business.

About Rad Source Technologies Inc.

Rad Source Technologies Inc was incorporated in the State of Florida in 1990. Rad Source, Inc., its wholly owned subsidiary was incorporated in the State of Florida in 1996. The Company is in the business of researching, developing and producing commercially viable products that utilize non-radioactive source radiation technology. The Company's historical efforts have been in the area of developing x-ray based equipment which can be substituted for that which utilizes radioactive isotopes to produce radiation.

The Company has developed and currently sells irradiation equipment that produces radiation utilizing x-rays, thereby eliminating the need for radioactive sources. Radiation producing equipment is used in a variety of applications ranging from medical equipment sterilization to biological research. Radiation can be used to eliminate reproduction of harmful organisms (applications include food and medical product sterilization, where bacteria would otherwise be a human threat), or alter the effect of active cells (as is the case with white blood cells in blood irradiation applications, which otherwise would harm immuno-deficient patients). The Company has also developed imaging equipment. This equipment utilizes x-rays to obtain images of objects. Imaging is used in a variety of industries ranging from electronic component production to medical research to view either the surface or interior of both organic and inorganic substances to detect imperfections, growths, etc.

The Company has produced two commercially available irradiation products, the RS 3000 Blood Irradiator and the RS 2000 Biological Irradiator. These products utilize x-rays to produce radiation and compete with radioactive isotope based equipment.

The RS 3000 Blood Irradiator is designed to be used by hospitals and blood centers for the irradiation of blood and blood products. The RS 3000 is a non-nuclear, x-ray irradiator and has been approved by the U.S. Food and Drug Administration (FDA). Irradiated blood is used by healthcare institutions for immuno-deficient patients (e.g., the elderly, infants and children, cancer and AIDS patients, transplant patients, etc.). Blood irradiation equipment has a global market and is dominated by two large companies which produce nuclear-based equipment only (i.e., they utilize radioactive isotopes as their radiation source).

The Company also produces the RS 2000. This product is used by research institutions for conducting biological experiments used in such areas as cancer and genetic research.

The Company's products are sold directly by in-house personnel and through independent sales representatives.

The above Company Fundamental Report is a half-ready report and contents are subject to change. It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.
