Abstracts

RF Micro Devices Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between RF Micro Devices Inc. and its competitors. This provides our Clients with a clear understanding of RF Micro Devices Inc. position in the [Semiconductor](#) Industry.

The report contains detailed information about RF Micro Devices Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for RF Micro Devices Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The RF Micro Devices Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes RF Micro Devices Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of RF Micro Devices Inc. business.

About RF Micro Devices Inc.

RF Micro Devices, Inc. engages in the design and manufacture of high-performance radio frequency (RF) components and compound semiconductor technologies.

The company's products enable worldwide mobility, provide enhanced connectivity, and support advanced functionality in the cellular handset, wireless infrastructure, wireless local area network (WLAN or WiFi), cable television (CATV)/broadband and aerospace and defense markets.

The company is a manufacturer of gallium arsenide (GaAs)-based compound semiconductors for RF applications. The company access silicon-based technologies and a small percentage of GaAs through external foundries.

In 2010, its Cellular Products Group (CPG) supplied cellular components to the majority of the handset industry's original equipment manufacturers (OEMs) and collaborated with the handset industry's baseband manufacturers, as the reference designs of these baseband manufacturers are utilized by both OEMs and original design manufacturers (ODMs). CPG is a supplier of cellular components, such as power amplifier (PA) modules, transmit modules, cellular switches and low noise amplifiers (LNAs), which perform various functions in the cellular front end section, existing between the

transceiver and the antennae. CPG is also a supplier of additional content in the cellular front end section, including filters and duplexers. CPG supplies its portfolio of cellular components into handsets and other mobile data connected devices, such as USB modems, netbooks and notebooks.

The company's Multi-Market Products Group (MPG) supplies a range of RF components for multiple applications in the communications, industrial and space/defense industries. MPG also provides foundry services for gallium nitride (GaN) wafer production. Major communications applications include mobile wireless infrastructure (2G, 3G and 4G), point-to-point and microwave backhaul, WiFi, microwave access (WiMAX), CATV infrastructure and optical access for hybrid-fiber coaxial (HFC) networks. Industrial applications include SmartEnergy/advanced metering infrastructure (AMI), private mobile radio and electronic toll collection. Aerospace and defense applications include military communications, radar and electronic warfare as well as commercial/military space communications.

Products and Applications

The company offers a line of products that range from single-function components to highly integrated ICs (integrated circuits) and multi-chip modules (MCMs). The company's ICs include gain blocks, LNAs, PAs, receivers, transmitters, transceivers, modulators, demodulators, attenuators, switches, frequency synthesizers and voltage-controlled oscillators (VCOs). The company's MCM products include PA modules, switch-filter modules, active antenna products, VCOs, phase-locked loops (PLLs), coaxial resonator oscillators (CROs), active mixers, variable gain amplifiers, hybrid amplifiers, power doublers and optical receivers. The company's passive components include splitters, couplers, mixers and transformers, as well as isolators and circulators, which are used primarily in wireless infrastructure and CATV set-top box applications.

The company's products employ an array of semiconductor process technologies, including GaAs, GaN, silicon complementary metal oxide semiconductor (CMOS) and silicon germanium (SiGe).

Markets

The company design, develop, manufactures and markets its products to both domestic and international OEMs and ODMs for commercial, industrial, military, aerospace and other markets in both wireless and wired communications applications.

Customers

The company's major customer is Nokia.

Significant Events

On October 01, 2010, RF Micro Devices Inc. and the Joint School of Nanoscience and Nanoengineering (JSNN) of North Carolina A&T State University and The University of North Carolina at Greensboro (UNCG) announced they have signed a joint research and development, facilities, and equipment use agreement.

History

RF Micro Devices, Inc. was founded in 1991.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
