Abstracts

Semtech Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Semtech Corp. and its competitors. This provides our Clients with a clear understanding of Semtech Corp. position in the [Semiconductor](#) Industry.

The report contains detailed information about Semtech Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Semtech Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Semtech Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Semtech Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Semtech Corp. business.

About Semtech Corp.

Semtech Corporation supplies analog and mixed-signal semiconductor products. The company designs, produces, and markets a range of products that are sold principally to customers in the consumer, industrial, computing, and communications end-markets.

Products

Power Management Products: Power management products control, alter, regulate and condition the power supplies with in electronic systems. The highest volume product types with in the power management product line are switching voltage regulators, combination switching and linear regulators, smart regulators and charge pumps.

Protection Products: The company designs, develops, and markets protection devices, which are often referred to as transient voltage suppressors (TVS). TVS devices provide protection for electronic systems where voltage spikes (called transients), such as electrostatic discharge generated by the human body, can permanently damage voltage-sensitive components. The company's portfolio includes filter and termination devices that can be sold as a complement to TVS devices. Its protection products feature low capacitance, providing protection and preserving signal integrity in high-speed voice and video interfaces and are low leakage. The company's protection products can be

found in a range of applications, including computer, data-communications, telecommunications and industrial applications.

Advanced Communication and Sensing Products: The company designs, develops, and markets a portfolio of proprietary wired communication, wireless communication and sensing integrated circuits (ICs). These ICs perform specialized timing and synchronization functions used in high-speed networks, specialized radio frequency (RF) functions used in various industrial, medical and networking applications, and specialized sensing functions used in industrial and consumer applications. Its communications products feature an integrated timing solution for packet based communications networks. Its communications and sensing products can be found in a range of applications, including communications, industrial, medical and consumer applications.

Transport and Datacom Products: The company designs, develops, and markets Serializer/Deserializer (SerDes) products for transport communication, including 40Gbps and 100Gbps chips and transceivers for short reach, metro and long haul applications and transceivers for datacenter applications. These products can be found primarily in communications applications.

Microwave and High-Reliability Products: The company designs, develops, and markets transceivers for wireless communications infrastructure, including 2G/3G/4G cellular repeaters, WiMAX CPE and base stations and defense and aerospace products, including satellite communication, ground to air beacons and unmanned air vehicles (UAV). This product segment also includes its line of discrete semiconductor products consists of rectifiers, assemblies (packaged discrete rectifiers), and other products. These products are typically used to convert alternating currents (AC) into direct currents (DC) and to protect circuits against very high voltage spikes or high surges. The company's microwave products can be found in a range of applications including industrial, military, medical, and communications systems.

Sales and Marketing

The company has direct sales personnel located throughout the United States, Europe, and Asia.

The company operates internationally primarily through its wholly owned Swiss subsidiary, Semtech International AG. Semtech International AG serves the European markets from its headquarters in St. Gallen, Switzerland and through its wholly-owned

subsidiaries based in France, Germany, Neuchatel – Switzerland, the United Kingdom, China, and Malaysia. Semtech International AG maintains branch offices, either directly or through its wholly owned subsidiaries, in Taiwan, Korea, and Japan. Semtech International also maintains a representative office in China. Independent representatives and distributors are also used to serve customers worldwide.

Significant Events

On December 08, 2010, Semtech Corp. announced it is working with International Business Machines Corp. and its 3D through-silicon via (TSV) technology to develop a ADC/DSP platform that has applications in fiber optic telecommunications, high performance RF sampling and filtering, test equipment and instrumentation, and sub-array processing for phased array radar systems.

Customers

Computing: The company's customers include Apple; Hewlett Packard; Lenovo; Quanta; Samsung Electronics; Lexmark; and Epson.

Communications: The company's customers include Alcatel; Cisco; Ericsson; Huawei; Motorola; Nokia Siemens; and Samsung.

High-End Consumer: The company's customers include LG Electronics; Research in Motion; Samsung; Sony Ericsson; and Panasonic.

Industrial: The company's customers include Honeywell; Itron; Raytheon; Siemens; Phonak; and General Atomics.

The company's customers include major original equipment manufacturers (OEMs) and their subcontractors in the computing, communications, consumer and industrial and military end-markets. Its customers also include Frontek Technology Corp., Compal Electronics, Intel, Quanta Computer, Research In Motion, and Sanyo.

Competition

The company considers its primary competitors with respect to its power management products to include Texas Instruments, National Semiconductor, Linear Technology, Maxim Integrated Products, Advanced Analogic Technologies, and Monolithic Power Systems. With respect to its protection products, its primary competitors are ST

Microelectronics N.V., NXP, ON Semiconductor, Protek, and Infineon. The company's primary competitors with respect to its communications and sensing products are Silicon Laboratories, IDT, Zarlink Semiconductor, and Micrel Semiconductor. With respect to its transport and datacom products, its primary competitors are Core Optics, Inphi and internal solutions. The company's primary competitors with respect to its microwave products include Microsemi Corporation, Hittite Microwave Corporation, L3 Communications, and Gallium Arsenide product manufacturers.

History

Semtech Corporation was founded in 1960.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
