Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Shiloh Industries Inc. business.

About Shiloh Industries Inc.

Shiloh Industries, Inc. manufactures first operation blanks, engineered welded blanks, complex stampings, and modular assemblies for the automotive, heavy truck, and other industrial markets.

The company designs and engineers precision tools and dies, and welding and assembly equipment for use in its blanking, welded blank and stamping operations and for sale to original equipment manufacturers, automotive suppliers, and other industrial customers. Its blanks, which are engineered two dimensional shapes cut from flat-rolled steel, are principally sold to automotive and truck OEMs and are used for exterior steel components, such as fenders, hoods and doors. These blanks include first operation exposed and unexposed blanks and engineered welded blanks.

The company's complex stampings and modular assemblies include components used in the structural and powertrain systems of a vehicle. Structural systems include body-in-white applications and structural underbody modules. Powertrain systems consist of deep draw components, such as oil pans and transmission pans. Additionally, the company provides a variety of intermediate steel processing services, such as oiling, leveling, cutting-to-length, slitting, edge trimming of hot and cold-rolled steel coils, and inventory control services for automotive and steel industry customers. The company

has 14 wholly owned subsidiaries at locations in Ohio, Michigan, Georgia, Tennessee and Mexico.

The company provides the service of steel processing and processes flat-rolled steel principally for primary steel producers and manufacturers that require processed steel for end-product manufacturing purposes. It also processes flat-rolled steel for internal blanking and stamping operations. The company's additional processing operations include slitting, cutting-to-length, edge trimming, roller leveling, and quality inspecting of flat-rolled steel.

Sales and Marketing

The company operates a sales and technical center in Canton, Michigan.

Customers

The company's customers include General Motors Corporation (General Motors), Ford Motor Company (Ford), and Chrysler LLC (Chrysler).

Competition

Competition for sales of steel blanks and engineered welded blanks is coming from companies, including independent domestic and international suppliers, and from internal divisions of General Motors, Ford and Chrysler. Competitors for engineered welded blanks include Delaco Welded Blanks, TWB Co., LLC, Powerlaser Ltd., and Procoil Corp. Primary competitors in North America for the engineered stamping and assembly business are Narmco Group, Midwest Stamping and Manufacturing Company, Gestamp North America Inc., and Midway Products Group.

History

Shiloh Industries, Inc. was founded in 1950.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
