term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Smiths Group plc competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Smiths Group plc business.

About Smiths Group plc

Smiths Group plc operates a family clock and watch-making business.

Smiths is operating internationally in a number of distinct sectors: Detection (chemical and explosives detection systems); Medical (single-use devices and equipment for anaesthesia/respiratory care and infusion therapy); Aerospace (avionic systems and equipment); and Specialty Engineering (mechanical seals, electrical interconnect, marine systems, tubular systems and flexible technologies).

Headquarters are in London and manufacturing businesses are located principally in the UK, USA and continental Europe. The chief executive is Keith Butler-Wheelhouse.

The principal activities of the company and its subsidiaries are the development, manufacture, sale and support of:

integrated aerospace systems, including electronic and actuation systems and precision components, for civil and military aircraft;

advanced security equipment, using the power of trace detection and x-ray imaging, to detect and identify explosives, chemical and biological agents, weapons and

contraband;

medical devices and critical care equipment aligned to specific therapies, principally airway, pain and temperature management and infusion. Also needle protection, critical care monitoring, women's healthcare and vascular access; and

mechanical seals used in industries ranging from petrochemical processing to aerospace; interconnect products to connect and protect safety-critical electrical and electronic equipment; navigational radar, marine electronics and charts; and rigid tubular and flexible hose assemblies.

The main manufacturing operations are in the United Kingdom, the Americas and Continental Europe.

Divisions

Detection: The Company provides technologically advanced security solutions to detect and identify explosives, chemical & biological agents, weapons and contraband. Smiths Detection is applying 21st century science to identify all those threats and provide immediate warnings. Products include trace detections systems, Smiths Heimann X-ray systems, metal detectors, biometrics and product inspection systems.

Medical

The Company is engaged in specialising in devices and equipment used in healthcare procedures, covering both critical and intensive care in hospitals, and continuing care in the community. It has a track record of innovative products designed to meet the precise needs of specialists, including surgeons and anaesthetists. These include a wide range of single-use devices for anaesthesia and respiratory care, mainly sold under the Portex brand, and recognised around the world as the premium products in their sector.

Smiths has developed technologies suited to changing approaches to healthcare, including the rise in treatment outside the hospital. Its lightweight infusion pumps allow patients to receive treatment while continuing a relatively normal life after being discharged from hospital. The pumps deliver measured doses of medication for areas like chemotherapy, pain management, and antibiotic therapy. Inside the hospital, Smiths' equipment helps doctors and nurses save lives, while also reducing their workload.

Aerospace

The Company is a major supplier of advanced avionics and mechanical and electrical equipment to the defence and civil aircraft sectors. It serves the world's two major commercial aircraft manufacturers, Airbus and Boeing, and the makers of military aircraft, regional jets and business jets. Its manufacturing expertise also extends to gas turbine engine components for every major engine programme in the western world.

Smiths Aerospace designs and manufactures equipment as varied as the all-composite propellers on the C-130J Hercules transport; the flight management computer on every Boeing 737; and systems to manage the electrical power on the Boeing 777 and the Apache helicopter.

Specialty Engineering

The division consists of five main business activities.

Flexible Technologies offers a wide range of flexible hose and ducting for commercial and consumer air moving products and for the conveying of gas, liquid and airborne solids in the industrial processes. It is a supplier of vacuum cleaner hose.

Interconnect division offers a broad range of electrical and electronic connectors, low loss coaxial, cable and connector assemblies, microwave components, antennas, lightning strike protectors, electrical surge suppressors, radio-frequency connectors, Passive Intermodulation Analysers, backshells and conduit systems.

John Crane is a technology provider and the manufacturer of Mechanical Seals and associated products. With a workforce of over 6000 people in 47 countries, it provides an unrivalled global presence combined with personalised local service and support.

Kelvin Hughes Limited is engaged in the design and manufacture of marine navigation systems for the commercial and defence markets. It is also a supplier of nautical charts both paper and digital.

Tubular Systems is involved in the design and manufacture of flexible fluid hoses; rigid tubular assemblies; and fuel gas-piping products. Together these businesses provide customers with total fluid transfer solutions.

Significant Events

Smiths Group plc has entered into an aerospace parts manufacturing joint venture with General Electric, Co. Under the programme, Smiths would produce five parts for new and spare F404 engines at its aerospace components plant in Asheville, North Carolina.

History

Smiths Group plc was founded in 1851.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
