The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of SolarWinds, Inc. business.

About SolarWinds, Inc.

SolarWinds, Inc. engages in the design, development, marketing, sale, and support of enterprise information technology (IT) management software. The company's offerings range from individual software tools to comprehensive software products that solve problems faced every day by IT professionals and help to enable effective management of networks and IT environments.

Products

The company offers a portfolio of products for network management and products for IT management. The company's products fit into one of the following four categories:

Free Tools

The company's free tools are desktop, laptop or server-based applications designed for use by individual IT professionals, and focused on a single network or infrastructure management task or technology. The company uses free tools primarily to drive awareness of its brand and its products with in the IT management community and to expand and build loyalty among its customers and its end-user community.

Tools for Engineers

The company's tools are desktop-based, laptop-based or server-based applications designed for individual network professionals who need specific solutions for routine, but complicated tasks. The company's tools for engineers include individual tools and toolsets, which combine tools together into a single package. The company's tools for engineers include Standard Toolset, Engineer's Toolset, Kiwi Syslog Server, Kiwi CatTools and LANsurveyor.

Entry-Level Monitoring Product

The company's entry-level monitoring product is designed for IT professionals and teams who need only basic IT infrastructure monitoring functionality. The company's entry-level monitoring product, ipMonitor, is a server-based network, server and application monitoring system for basic up/down monitoring. It features an installation and configuration process, basic Web interface, and an intuitive operations console for displaying the up/down status of IT resources.

ipMonitor provides monitoring for network devices, servers and common applications such as Microsoft Exchange, Active Directory, and SQL Server and includes a built-in database and Web server, further simplifying installation and enabling all components of the product to run on a single server.

Enterprise-Class Network and IT Management Products

The company's enterprise-class network and IT management products are used by network professionals and IT teams in companies of all sizes to configure, monitor, and report on network equipment, servers, applications, and storage to determine the overall health and performance of the network and IT infrastructure and to automate the processes of change, compliance and inventory. These products provide IT management functionality and are capable of scaling from a single device to approximately 100,000 devices. The company's enterprise-class network management products are represented by its Orion family of products, and most share integrated components, including databases, Web servers and user administration. The Orion family of products is designed to operate together, while still allowing network professionals to purchase and deploy only the products they need. The company's enterprise-class storage and virtual server management products are represented by its Profiler family of products.

The company's enterprise-class network and IT management products are:

Orion Network Performance Monitor: The company's product, Orion Network Performance Monitor, or Orion NPM, is a server-based fault and performance management platform designed to minimize network downtime. Orion NPM monitors and analyzes real-time, in-depth network performance metrics for routers, switches, servers and other Simple Network Management Protocol, or SNMP, enabled devices to provide both and historical views into the availability and performance of a network and all devices attached to it. End-users can configure Orion NPM to alert network professionals of network events, including thresholds, correlated events, sustained conditions and complex combinations of device states.

Orion Modules: The company's Orion modules are a series of add-ons to Orion NPM that extend its network

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
