Abstracts

T-3 Energy Services Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between T-3 Energy Services Inc. and its competitors. This provides our Clients with a clear understanding of T-3 Energy Services Inc. position in the Industry.

The report contains detailed information about T-3 Energy Services Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for T-3 Energy Services Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The T-3 Energy Services Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes T-3 Energy Services Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of T-3 Energy Services Inc. business.

About T-3 Energy Services Inc.

T-3 Energy Services, Inc. engages in the design, manufacture, repair and servicing of products used in the drilling and completion of new oil and gas wells, the workover of existing wells, and the production and transportation of oil and gas.

Product Lines

The company has three product lines: Pressure and Flow Control, Wellhead, and Pipeline. It offers original equipment products and aftermarket parts and services for each product line. Aftermarket parts and services include all remanufactured products and parts, repair, and field services.

Pressure and Flow Control: The company designs, manufactures and provides aftermarket parts and services for pressure and flow control products used in the drilling, completion, production and workover of onshore, offshore and subsea applications. The company's pressure and flow control products include: blow-out preventers (BOPs); BOP control systems; elastomer products; production, drilling and well service chokes; manifolds; and high pressure gate valves.

Wellhead: The company designs, manufactures and provides aftermarket parts and

services for wellhead equipment used for onshore oil and gas production. Its wellhead products include wellheads, production chokes and production valves. Wellhead products are sold to oil and gas producers and are used during both the drilling and completion phases of an oil or gas well, as well as during the productive life of a well.

Pipeline: The company designs, manufactures, and provides aftermarket parts and services for various valves primarily for onshore pipeline applications. Its pipeline products include valves for pipeline applications, including low pressure gate, ball, control and check valves. The company's pipeline valves and related products are used in field or gathering systems and in interstate pipeline transmission systems.

Products and Services

BOPs: A BOP is a pressure control device located at the top of a well. During drilling operations, a series of BOPs are installed to provide pressure control. When activated, BOPs seal the well and prevent fluids and gases from escaping, protecting the safety of the crew and maintaining the integrity of the rig and wellbore.

BOP control systems: The company's BOP control systems are actuators that are used to remotely open and close BOPs utilizing hydraulic pressure.

Manifolds and control valves: Manifolds are arrangements of piping and valves used to control, distribute and monitor fluid flow. Control valves, which can be manually, hydraulically or electrically actuated, are valves used to control flow in various oilfield and industrial applications. The company's manifolds and control valves are used in oil and gas production, drilling and well servicing applications.

Chokes: A choke is a valve used to control fluid flow rates or reduce system pressure. Chokes are used in oil and gas production, drilling and well servicing applications and are often susceptible to erosion from exposure to abrasive and corrosive fluids. Chokes are available for both fixed and adjustable modes of operation.

Custom protective coatings: The company's protective coatings consist of thin liquid or powder material that once applied over a structure prevents corrosion, wear, and leakage problems. The company's protective coatings are applied to various oilfield and industrial products.

Elastomer products: Elastomer products, which are constructed of molded rubber and metal, are the sealing elements in BOPs and wellhead equipment.

Wellhead products: The company's wellhead equipment includes wellheads, production chokes and production valves used for onshore oil and gas production. Wellhead equipment is installed directly on top of a completed well to ensure the safe flow of oil or gas from the wellbore to downstream separation and pipeline equipment. Wellhead equipment generally consists of a series of flanges, fittings and valves.

Pipeline products: The company's pipeline products include various valves for pipeline applications, including gate, ball, control and check valves. Pipeline valves and related products are used in gathering systems (pipelines connecting individual wellheads to a larger pipeline system) and interstate pipelines (pipelines used to deliver oil, gas and refined products over long distances).

Aftermarket parts and services: The company's aftermarket parts and services are focused on repair and remanufacture of BOPs, valves and other products and the installation and repair of wellhead and pipeline products. It provides aftermarket services for its products, as well as other brands, including BOPs sold by its major competitors.

Customers and Markets

The company's products are used in onshore, offshore and subsea applications and are marketed throughout the world. Its customer base consists of other oilfield service companies, major and independent oil and gas companies, national energy companies, and pipeline companies.

Geographic Areas

The company primarily serves domestic sources, including multi-national companies domiciled in the United States and Canada, and assets are held in the United States, Canada and India. Its products are deployed to various oil-and-gas producing regions of the world, including, in addition to the United States and Canada, South America, Mexico, the Middle East, Africa, Europe, and Russia.

Competition

The company's primary competitors are Cameron International Corporation, National Oilwell Varco, Inc., GE Oil & Gas Group (including Vetco Gray and Hydril), and FMC Technologies.

History

T-3 Energy Services, Inc. was founded in 1989.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?
Rare?
Costly to imitate?
Organized properly?
