Abstracts

Tek Digital Corp. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Tek Digital Corp. and its competitors. This provides our Clients with a clear understanding of Tek Digital Corp. position in the Industry.

The report contains detailed information about Tek Digital Corp. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Tek Digital Corp.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Tek Digital Corp. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Tek Digitel Corp. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Tek Digitel Corp. business.

About Tek Digitel Corp.

TEK DigiTel Corporation formed in Maryland in 1995 is a Wyoming business corporation. The Company develops, manufactures and markets a line of communications access products for networks. The Company develops equipment for use by individuals and small businesses that converts analog voice data to a digital format suitable for network transmission using standard Internet Protocols (IP). The Company targets its products to a new breed of telecommunications companies that base their telecommunications structure on the Internet by offering Internet connectivity and VoIP as their primary solutions, as opposed to traditional service providers that base delivery on the conventional telephone network.

Products

The Company manufactures a line of VoIP gateway devices, the company's V-Server® product line, designed to allow ITSPs to deliver a variety of voice, data and fax services to the small to medium-sized and SOHO user using the Internet and the conventional telephone network. These services include local and long-distance voice connectivity, enhanced voice features such as voice mail, unified messaging and fax transmission, as well as basic Internet data access for multiple users at a single site. "V-Server" is the company's registered trademark.

The Company has also developed a number of personal computer (PC) client and server-based provision/management tools to allow the gateway devices to be configured and managed to support the interconnection of users across public Internet or private corporate Intranets.

The V-Server products are designed for use with a wide variety of Internet access services, including: Integrated Services Digital Networks (ISDNs); Wireless telephones; Digital Subscriber Loops (DSLs); and Cable modem delivery. With its rich feature set, the current V-Server line of products allows service providers and enterprises to integrate VoIP technology with other Internet solutions.

V-Server Products

The V-Server Router/Gateway provides the physical connection between Internet and the analog telephony equipment including telephone handset and the PSTN. In addition to VoIP gateway functionality, each V-Server includes full IP routing support to provide traffic control, including voice traffic prioritization, and firewall protection. A firewall is a security program that prevents unauthorized access. The IP router also allows more than one computer to share the IP address provided by the ISP. The V-Server can be configured locally or remotely using a standard touchtone telephone. These V-Server devices are listed below:

V-Server iGATE and iPRO: All iGATE and iPRO devices have an Ethernet Local Area Network (LAN) port to connect to the local computers of an office's network. Ethernet is the most common technology used today for connecting multiple computers in networks. For Internet access the company's iGATE supports ISDN Basic Rate Interface (BRI) or an external modem connection. On the voice or telephony interface, it supports two (iGATE) and four (iPRO) analog voice ports. Each one of the analog ports can be configured for PSTN connection or for a standard analog telephone. The iGATE and iPRO can also be ordered in a gateway-only version (no direct Internet interface) to connect telephones to a corporate LAN.

V-Server Dual Ethernet: Similar to the iGATE and iPRO with two and four voice ports and a local Ethernet connection, the Dual Ethernet V-Server provides an additional Ethernet port. It is focused on broadband services and can be directly connected to DSL, wireless or cable modems via the additional Ethernet port. The ability of the product to be customer-installed on an existing broadband access link makes the V-Server Dual Ethernet especially attractive to service providers wishing to avoid the

expense of a "re-installation" visit to their customer sites to add voice support. Many features are supported to make this Dual Ethernet product attractive to the cable modem and DSL modem users for their VoIP needs.

V-Server OfficeBuilder: Combining advanced voice switching with the IP gateway and routing functionality, the OfficeBuilder allows a small office to optimize its communicat

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
