The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Tidewater Inc. business.

About Tidewater Inc.

Tidewater Inc. provides offshore supply vessels and marine support services to the offshore energy industry. As of March 31, 2010, the company had approximately 394 vessels servicing the global energy industry.

The company provides services in support of all phases of offshore exploration, field development and production, including towing of (and anchor handling for) mobile offshore drilling units; transporting supplies and personnel necessary to sustain drilling, workover and production activities; offshore construction and seismic support; and various specialized services, such as pipe and cable laying. The size and composition of the company's offshore service vessel fleet includes vessels that are operated under joint ventures, as well as vessels that are stacked or withdrawn from service.

The company also operates two shipyards, which construct, modify and repair vessels. The shipyards perform both repair work and new construction work for outside customers, as well as the construction, repair, and modification of its own vessels.

Segments

The company's segments include the United States and International.

Areas of Operation

The company's fleet is deployed in the major offshore oil and gas areas of the world. The principal areas of the company's operations include the U.S. Gulf of Mexico, the Persian/Arabian Gulf, and areas offshore Australia, Brazil, Egypt, India, Indonesia, Malaysia, Mexico, Trinidad, and West Africa.

Vessel Classifications

The company's vessels regularly and routinely move from one operating area to another, often to and from offshore operating areas of different continents.

Deepwater Vessels: Included in this vessel class are platform supply vessels (PSVs) and high-horsepower anchor handling towing supply (AHTS) vessels. This vessel class is chartered to customers for use in transporting supplies and equipment from shore bases to deepwater and intermediate water depth offshore drilling rigs, platforms and other installations. Platform supply vessels, which have cargo handling capabilities, serve drilling and production facilities and support offshore construction and maintenance work. The anchor handling towing supply vessels are equipped for and are capable of towing drilling rigs and other marine equipment, as well as setting anchors for positioning and mooring drilling rigs. Also included in this vessel class are specialty vessels that can support offshore well stimulation, construction work, subsea services and/or have fire fighting capabilities and/or accommodation facilities.

Towing-Supply and Supply Vessels: This is the company's fleet class by various vessels. Included in this class are anchor handling towing supply vessels and supply vessels with average horsepower below 10,000 BHP, and platform supply vessels that are less than 230 feet.

Crewboats and Utility Vessels

Crewboats and Utility Vessels: Crewboats and utility vessels are chartered to customers for use in transporting personnel and supplies from shore bases to offshore drilling rigs, platforms and other installations.

Offshore Tugs: Offshore tugs tow floating drilling rigs; assist in the docking of tankers; tow barges; assist pipe laying, cable laying and construction barges; and are used in other commercial towing operations, including towing barges carrying bulk cargoes and

containerized cargo.

Other Vessels: The company's vessels also include inshore tugs; and production, line-handling and various other special purpose vessels. Inshore tugs, which are operated principally within inland waters, tow drilling rigs to and from their locations, and tow barges carrying equipment and materials for use principally in inland waters for drilling and production operations. Barges are either used in conjunction with company tugs or are chartered to others.

Shipyards Operations

Quality Shipyards, L.L.C., a wholly owned subsidiary of the company, operates two shipyards in Houma, Louisiana, which construct, modify and repair vessels. The shipyards perform both repair work and new construction work for outside customers, as well as the construction, repair and modification of the company's own vessels.

Customers

The company's principal customers are major and independent oil and natural gas exploration, field development and production companies; drilling contractors; and other companies that provide various services to the offshore energy industry, including offshore construction companies, diving companies and well stimulation companies. The international business segment also has customers that are foreign government-owned or -controlled organizations and companies that explore and produce oil and natural gas.

History

Tidewater Inc. was founded in 1956.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
