Abstracts

Titanium Metals Corporation Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Titanium Metals Corporation and its competitors. This provides our Clients with a clear understanding of Titanium Metals Corporation position in the [Metals and Mining Industry](#).

The report contains detailed information about Titanium Metals Corporation that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Titanium Metals Corporation. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Titanium Metals Corporation financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Titanium Metals Corporation competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Titanium Metals Corporation business.

About Titanium Metals Corporation

Titanium Metals Corporation produces titanium melted and mill products with production facilities in both the United States and Europe. The company's products include titanium sponge, melted products, mill products and industrial fabrications.

Products

The company is a vertically integrated titanium manufacturer whose products include: titanium sponge, the basic form of titanium metal used in titanium products; melted products (ingot, electrodes and slab), the result of melting titanium sponge and titanium scrap, either alone or with various alloys; mill products that are forged and rolled from ingot or slab, including long products (billet and bar), flat products (plate, sheet and strip) and pipe; and fabrications (spools, pipe fittings, manifolds, and vessels) that are cut, formed, welded, and assembled from titanium mill products.

The company's titanium sponge production facility in Henderson, Nevada uses vacuum distillation process (VDP) technology, which removes the magnesium and magnesium chloride residues by applying heat to the sponge mass while maintaining a vacuum in a chamber. The company electrolytically separates and recycles the residual magnesium

chloride, a by-product of the VDP process.

Melted products (ingot, electrodes and slab) are produced by melting sponge and titanium scrap, either alone or with alloys, to produce various grades of titanium products suited to the ultimate application of the product. By introducing other alloys, such as vanadium, aluminum, molybdenum, tin and zirconium, the melted titanium product is engineered to produce quality grades with varying combinations of certain physical attributes, such as strength-to-weight ratio, corrosion-resistance, and milling compatibility.

Mill products are forged or rolled from its melted products (ingot or slab). Mill products include long products (billet and bar), flat products (plate, sheet and strip) and pipe. The company's mill products can be further machined to meet customer specifications with respect to size and finish. The company sends certain products to outside vendors for further processing before being shipped to customers. In France, its primary processor is also a partner in its 70%-owned subsidiary, TIMET Savoie, S.A.

Distribution

The company sells its products through its own sales force based in the U.S. and Europe. It also owns 8 service centers (8 in the U.S. and 3 in Europe), which the company uses to sell its products on a just-in-time basis.

Markets

The market for titanium in the military sector includes sales of melted and mill titanium products engineered for applications for military aircraft (both engines and airframes), armor and component parts, armor appliqué on ground combat vehicles and other integrated armor or structural components. The company sells directly to the major manufacturers associated with military programs on a global basis.

Outside of commercial aerospace and military sectors, the company manufactures a range of products for customers in the chemical process, oil and gas, consumer, sporting goods, healthcare, automotive, and power generation sectors. In addition to melted and mill products, which are sold into all market sectors, the company sells certain other products, such as titanium fabrications, titanium scrap, and titanium tetrachloride.

Customers

The company has long-term agreements with certain major customers, including The Boeing Company, Rolls-Royce plc and its German and U.S. affiliates, United Technologies Corporation, the Safran companies, Wyman-Gordon Company, and VALTIMET SAS.

Competition

The company's principal competitors in the aerospace titanium market are Allegheny Technologies Incorporated (ATI) and RTI International Metals, Inc. (RTI), both based in the United States, and Verkhnyaya Salda Metallurgical Production Organization (VSMPO), based in Russia. UNITI (a joint venture between ATI and VSMPO), RTI and certain Japanese producers are its principal competitors in the industrial and emerging markets.

History

Titanium Metals Corporation was founded in 1950.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
