The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of TNS Inc. business.

About TNS Inc.

TNS, Inc., an international data communications company, provides networking, data communications and value added services to retailers, banks, payment processors, financial institutions and telecommunication firms. The company provides services to customers in the United States, Canada, Mexico, Europe, Latin America, and the Asia-Pacific region. It provides services through its data network, which is designed specifically for transaction-oriented applications.

Point-of-Sale (POS)

The company's POS division markets its data communications services directly to payment processors in the United States, Canada and Mexico. It also markets POS data communications services to entities responsible for the transmission of state lottery transactions, federal and state electronic benefits transfer and healthcare transactions, as well as directly to select categories of merchants and retailers.

The company's private, secure data networks were designed specifically to address the data communications requirements of the payment processing industry. Its data communications services provide customized routing technology, built-in redundancy and geographic diversity and are configured to provide call connection. The company's data networks connect a merchant's POS terminal or an off-premise ATM to the

payment processor's host computer.

The company provides multiple means for the POS terminal or off-premise ATM to access its data network. Merchant POS terminals and off-premise ATMs can connect directly to its network using its dial-up service, which utilizes telephone services obtained from interexchange carriers and local exchange carriers. Its fixed broadband and wireless service offerings enable merchants to utilize broadband connectivity in their store to transmit data from the POS terminal or ATM to the payment processor. The company's services include a proprietary performance monitoring and management information reporting application which is used by its customers to centrally monitor and manage the equipment at their locations.

The company configures and provides modems that enable off-premise ATM operators to convert leased line ATMs to ATMs that use dial-up connections or wireless service. For dial-up access services, it typically charges its customers a fixed fee per transaction plus a variable time-based charge for transactions that exceed a specified period of time.

International Service Division (ISD)

The company has developed network technology and services to serve its customers in the United States, which are applicable to the data communications needs of payment processing and financial services industries in other countries. The company provides services to the financial institutions in the United Kingdom which acquire and process credit and debit transactions in the United Kingdom. It also provides services to financial institutions operating ATMs. Within Europe, its services are predominantly related to providing data connectivity to the POS and ATM industries.

In addition to its network connectivity services in ISD, the company provides card present and card not present payment gateway services to multi-channel merchants, as well as card associations, which offer services over the Internet. The company also provides managed broadband solutions and dial to IP conversion devices to merchants who desire to migrate their payment infrastructure from dial to IP technology, as well as payment processing services to ATM owners. Additionally, it provides services to payment processors that are not used by payment processors in the United States. These include settlement and offline polling services, which enable merchants to store transaction data until the payment processor retrieves the data after business hours. The company offers financial services division (FSD) services.

The company has operations in Australia, Austria, Bermuda, France, Germany, Hong Kong, India, Ireland, Italy, Japan, Malaysia, New Zealand, Poland, Romania, Singapore, South Korea, Spain, Sweden, Thailand, the Netherlands, Turkey, and the United Kingdom.

Telecommunication Services Division (TSD)

The company owns and oper

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
