Abstracts

Vishay Precision Group, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Vishay Precision Group, Inc. and its competitors. This provides our Clients with a clear understanding of Vishay Precision Group, Inc. position in the [Computers and Electronic Equipment](#) Industry.

The report contains detailed information about Vishay Precision Group, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Vishay Precision Group, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Vishay Precision Group, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Vishay Precision Group, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Vishay Precision Group, Inc. business.

About Vishay Precision Group, Inc.

Vishay Precision Group, Inc. engages in the design, manufacture, and marketing of resistive foil technology products for various applications.

Segments

The company operates in two product segments, Foil Technology Products, which include strain gages, ultra-precision foil resistors, and current sensors; and Weighing Modules and Control Systems, which include transducers/load cells, instruments, weighing modules, and systems for process control or onboard weighing applications.

Products

Bulk Metal Foil Resistors and Resistor Current Sensors – Resistors are basic components used in all forms of electronic circuitry to adjust and regulate levels of voltage and current. A resistor can also be used to detect current, by measuring the voltage drop across its path. The company's foil resistors and current sensors are used in applications requiring a degree of precision and stability, such as in medical applications, testing equipment, audio equipment, and aerospace and military

applications.

Foil Strain Gages – Strain gages are electronic sensors used to detect weight and other forms of stress. They are used in structural stress analysis, for example in aircraft and automobiles, and in weighing, process control, and other forms of force measurement.

Transducers / Load Cells – Foil strain gage transducers consist of one or more strain gages bonded to a metallic support. The term ‘load cell’ is primarily used to describe transducers used in weighing applications. A transducer is mounted on a structure subject to weight or other stress, such as the platform of an industrial scale. The change in resistance of the strain gages in response to deformation of the transducer by the applied load is detected by electronic instrumentation. Transducers are manufactured with different designs and configurations depending on their application and the type of stress or strain to be measured, for example weight or tension. The company produces both analog and digital transducers.

Modules – Modules are transducers combined with a mounting and with external features, such as instruments and cables and are used for weighing and control applications.

Instruments – Instruments measure, process, digitize, display, and record the output of its strain gages, transducers, and control systems.

Control Systems – Control systems are integrated systems for the detection and measurement of weight and other types of stress or strain, primarily in industrial processes. These include systems to control process weighing in food, chemical, and pharmaceutical plants; force measurement systems used to control Web tension in paper mills, roller force in steel mills, and cable tension in winch controls; on-board weighing systems installed in logging and waste-handling trucks; and special scale systems used for aircraft weighing and portable truck weighing.

PhotoStress Products – PhotoStress coatings and instruments use an optical process to reveal and measure the distribution of stresses in structures under live load conditions. They are used to improve structural design in aerospace, automotive, military, civil engineering, industrial, and mechanical applications.

Customers and Markets

The company's products, within the industrial market, serves various applications in the

waste management, bulk hauling, logging, scale, engineering systems, pharmaceutical, oil, chemical, steel, paper, and food industries. Its products also have uses in military/aerospace, automotive, and consumer product applications. The company also sells through various sales channels, including original equipment manufacturers (OEMs), electronic manufacturing services companies (EMS) (which manufacture for OEMs on an outsourcing basis), independent distributors, and for its weighing modules and control systems products, end-use customers. It sells its product to customers located primarily in the Americas; Europe; and Asia.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
