The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Voestalpine AG business.

About Voestalpine AG

voestalpine AG, through its subsidiaries, engages in the production, processing, and distribution of materials made of steel. The company also engages in the research and development in the area of metallurgy, metal processing, and materials technology.

Segments

The company conducts its operations through five divisions: Steel, Special Steel, Railway Systems, Profilform, and Automotive.

Steel division: The Steel division focuses on the production and processing of flat steel products for the automotive, household appliance, and construction industries. This division produces and processes hot and cold-rolled steel, as well as electrolytically galvanized, hot-dip galvanized, organically coated plate and electrical sheet steel. It also has other related activities, such as a foundry, heavy plate production, steel service center processing, steel trading, logistics services, and mechatronics. The products of this division are mainly supplied to the European automotive and automotive supply industry, the household appliances industry, as well as the building supply industry.

Special Steel division: The Special Steel division offers tool steel, bimetallic strips,

cutting and creasing rules, rule die steel, and blades for gas and steam turbines.

Railway Systems division: The Railway Systems division produces rod wire, drawn wire, prestressing steel, and tubes, as well as rails and switches, and turnout systems. This division offers a service for railway construction, including planning, transport, logistics and laying, and produces its own steel.

Profilform division: The Profilform division offers welded tubes and hollow sections, open standard sections, and various custom-rollforming of special tubes and sections and in storage technology and road crash barriers. The products of division are used in various industrial branches, such as the automobile industry, including commercial vehicles and busses; the construction industry; civil engineering; construction machinery; transport and storage technology; the furniture industry; road safety; and the aerospace industry.

Automotive division: The Automotive division engages in processing steel and other materials, such as plastics and hybrids into components, modules, and systems for the automotive industry.

Markets

The company sells its products primarily in Austria, Italy, Asia, North America, Brazil, Germany, Benelux, and France.

Acquisitions

During the period ended March 31 2009, the company acquired 100% of BÖHLER-UDDEHOLM AG; 50% of TSF-A GmbH (Austria, production of switch ties); and 100% of Leading Edge Enterprises Inc. (Illinois), a manufacturer of manganese frogs and cast ductile iron.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
