Abstracts

Weatherford International Ltd. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Weatherford International Ltd. and its competitors. This provides our Clients with a clear understanding of Weatherford International Ltd. position in the [Energy](#) Industry.

The report contains detailed information about Weatherford International Ltd. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Weatherford International Ltd.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Weatherford International Ltd. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Weatherford International Ltd. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Weatherford International Ltd. business.

About Weatherford International Ltd.

Weatherford International Ltd. provides equipment and services used in the drilling, evaluation, completion, production, and intervention of oil and natural gas wells to independent oil and natural gas producing companies worldwide.

Product Offerings

The company's product offerings are grouped into ten service lines: artificial lift systems; drilling services; well construction; drilling tools; completion systems; wireline and evaluation services; re-entry and fishing; stimulation and chemicals; integrated drilling; and pipeline and specialty services. The company's integrated drilling service line is offered only outside of North America.

Artificial Lift Systems

Artificial lift systems are installed in oil wells and, to a lesser extent, natural gas wells that do not have sufficient reservoir pressure to raise the produced hydrocarbon to the surface. These systems supplement the natural reservoir pressures to produce oil or natural gas from the well. The company provides progressing cavity pumps, reciprocating rod lift systems, gas lift systems, hydraulic lift systems, plunger lift

systems, and hybrid lift systems. It also offers wellhead systems and production optimization. The company offers various hybrid artificial lift systems which are engineered for special applications and may incorporate two or more of the artificial lift methods.

The company offers a line of conventional wellhead equipment and valves manufactured to the latest API industry specifications and client requirements, including conventional surface wellheads through 20,000 psi; gate valves from 2,000 to 20,000 psi; wellhead systems (drill-through, multi-bowl, unitized and mud-line); and all the accessories and aftermarket services to go with them.

For wellsite intelligence, the company offers specific controllers for each type of artificial lift. These controllers contain computers with specific logic to control the well in response to changes in the reservoir, artificial-lift equipment or well completion. The desktop software provides analytical tools that allow the operator to make changes by controlling the well directly or by changing the parameters that the controller is using to operate the well.

The company's Production Optimization group develops metering and software solutions to supply real-time production information to the operator, allowing production measurements as a part of individual well and field optimization. The company provides tools for optimizing workflow. These software tools assist the operator in tracking the operations needed for optimal field management. The company provides mechanical production treaters and sand management systems to improve heavy-oil flow to and separation in sit-storage tanks.

Drilling Services

Drilling Services include directional drilling, Controlled Pressure Drilling (CPD) & Well Testing, drilling-with-casing (DwC), and drilling-with-liner (DwL) systems and surface logging systems. The company supplies a range of specialized, patented equipment for directional drilling, and real-time wellbore logging, including measurement while drilling (MWD) and logging while drilling (LWD); rotary steerable systems (RSS); and directional drilling services, including surveying, design, and operational support for directional and horizontal drilling and performance drilling in vertical wells; products include drilling motors and other associated equipment, software, and expertise.

The company's CPD offerings are provided through three techniques: managed pressure drilling, underbalanced drilling, and air drilling.

Managed Pressure Drilling (MPD) — This technique provides a form of primary well control, using a closed, pressurized fluid system that precisely controls the wellbore pressure profile than mud weight adjustments alone.

Underbalanced Drilling (UBD) — This technique is used in development, exploration, and mature field applications to minimize formation damage and maximize productivity.

Air Drilling — This technique applies reduced density fluid systems to drill sub-hydrostatically.

Well Testing — Well testing uses specialized equipment and procedures to obtain ess

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
