The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Williams Controls Inc. business.

About Williams Controls Inc.

Williams Controls, Inc. engages in the design, manufacture, and sale of electronic throttle controls, pneumatic controls, and electronic sensors for heavy trucks, transit buses, off-road equipment, and military applications. The company also produces a line of pneumatic control products, which are used for vehicle control system applications, such as power take-off's (PTO's) and air-control applications.

The company also designs and manufactures a line of adjustable foot pedals and arm rests, and is developing joysticks primarily for the off-road market. Adjustable foot pedals are devices that move the throttle, brake, and the clutch pedal, closer or further away from the vehicle driver to compensate for driver heights.

Sales and Marketing

The company sells its products worldwide. It sells the majority of its products directly to heavy truck, transit bus, and off-road original equipment manufacturers worldwide. The company primarily sells its products in the United States, Canada, and Mexico. Outside of the United States, it primarily sells in Canada, Belgium, Sweden, Mexico, China, and Korea. It also sells in other European countries, South America, Pacific Rim nations, and Australia. The company markets its products from its sales facilities in Portland,

Oregon; Shanghai, China; and Munich, Germany.

Customers

The company's major customers include The Volvo Group, Paccar, Inc., Daimler Trucks NA, Navistar International Corporation, Caterpillar, Inc., and Bendix Commercial Vehicle Systems. It also sells its products through a network of independent distributors and representatives, which sell to smaller original equipment manufacturers (OEMs) and to truck and bus owners as replacement parts.

Competition

The company's major competitors for its electronic throttle controls include AB Eletronik GmbH; Kongsberg Automotive; Siemens VDO Automotive AG; Felsted Products, LLC; Hella KGaA Hueck & Co.; Heinrich Kubler AG; and Comesys, Ltd. Its Chinese competitors include Alion and GoFa. Other companies, including Dura Automotive Systems, Inc. and CTS Corporation compete in the passenger car and light truck market.

History

Williams Controls, Inc. was founded in 1937.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
