### Research Review Scope:

Cell and gene therapy is a vast industry that uses cells and genes in research, development, manufacture, and distribution to treat diseases. Cells and genes can be utilized in preclinical studies, clinical trials, the production of therapies, viral vectors, modified cells, and personalized medicine.

One of the major factors in this market's growth is the increasing investment and funding. The rapid growth in research and development of new cell and gene therapies, along with a new level of innovation, also fuels the growth of this market. However, the high cost of developing these therapies restrains the market's growth.
